BUREAU OF SHIPS

WASHINGTON 25, D. C.

17 DECEMBER 1945.

1. "Ships' Data, U. S. Naval Vessels, 1945" is issued in three volumes and contains a list of U. S. Naval Vessels, together with classification, identification numbers, characteristics data, index, etc. NAVSHIPS 250-012 is Volume III, of the above publication and contains information on Auxiliaries, District Craft and Unclassified Vessels.

2. Other Volumes are as follows:

Volume I, NAVSHIPS 250-010, is RESTRICTED and covers BB, CA, CB, CL, CV, CVB, CVL, CVE, DD, DE, SS, CM, and DM.

Volume II, NAVSHIPS 250-011, covers Mine Vessels, (less DM and CM), Patrol Vessels, Landing Ships and Craft.

3. NAVSHIPS 250-010, NAVSHIPS 250-011, and NAVSHIPS 250-012, are effective upon receipt. They supersede the 1943 edition of Ships, Data U. S. Naval Vessels, together with the 1944 addenda thereto, which publications should be destroyed.

## SHIPS' DATA, U. S. NAVAL VESSELS

### PREFACE

In order that the 1945 edition of "Ships' Data, U. S. Naval Vessels" may be of greater value to the Naval Service, certain additional data, not included in the previous edition, is given herein as will be noted. Comment and recommendations regarding the above changes together with any suggestions as to further changes to be included in future editions of this publication will be welcomed by the Bureau of Ships. Errors which may be noted in this edition should be reported promptly to the Bureau of Ships, Navy Department, Washington, D. C.

## “SHIPS’ DATA, U. S. NAVAL VESSELS”

### DEFINITIONS, NOTES, AND ABBREVIATIONS

#### NOTES AND DEFINITIONS

The following notes and definitions regarding terms given in column headings are furnished for further information in regard to the data included in the columns. Where no notes or definitions are given, the terms are considered self-explanatory.

1. LENGTH OVER-ALL.—The length of the vessel measured from the foremost point of the stem to the aftermost point of the stern. In the case of aircraft carriers, the length over-all includes overhang of flight deck, if any.

2. LENGTH ON WATER LINE is the total length on the designed water line, except where otherwise indicated. This is the length between perpendiculars (LBP) in naval practice.

3. EXTREME BEAM.—The extreme width of the hull of the vessel over plating, fenders, or guards for surface vessels. Maximum width at or below main deck.

4. EXTREME BEAM AT OR ABOVE MAIN DECK.—(Data given for Aircraft Carriers, CV, CVB, CVL, CVE, only.) Maximum width at or about flight deck including any projections such as gun sponson, at nearby deck levels.

5. STANDARD DISPLACEMENT (as established by the Treaty for the limitation of naval armament signed at London, March 25, 1936).—“The standard displacement of a surface vessel is the displacement of the vessel, complete, fully manned, engined and equipped ready for sea, including all armament and ammunition, equipment, outfit, provisions, and fresh water for crew, miscellaneous stores and implements of every description that are intended to be carried in war, but without fuel or reserve feed water on board.” For standard displacement of a submarine, see Article 1, paragraph A (2) of above mentioned Treaty. Data given is for ship as designed, except as otherwise indicated.

6. FULL LOAD DISPLACEMENT.—Displacement of ship complete, ready for service in every respect with water in boilers and machinery at steaming level and officers, crew and their effects on board. For ships, designed with emergency amounts of lubricating oil, potable water, reserve feed water, fuel and gasoline, the designed full allowance of these items are used. Where no emergency amounts are included in the design, weights corresponding to actual tank capacities are used. Weight of fuel oil included in above, includes weight of water in compensating system, if any.

7. LIMITING DRAFT is that draft established by the Bureau of Ships to be used “as a guide to operating personnel against overloading.” This is a mean draft and does not show projections below keel, trim, or drag.

8. MAXIMUM DRAFT is the maximum draft of ship for navigational purposes either forward or aft and includes projection below keel, if any.

9. TONS PER INCH IMMERSION is the weight required to increase the draft of the vessel by one inch. This data is obtained at a draft which is considered by the Bureau to represent average operating conditions.

10. DIVING TRIM.—A submarine is said to be in “diving trim” in any condition of loading when it is so compensated for variable weights that completion of flooding of the ballast and safety tanks will cause the vessel to submerge with neutral buoyancy and zero fore and aft trim.

11. SURFACE CONDITION, NORMAL, DIVING TRIM designates the “diving trim” condition in which the main-ballast, fuel-ballast, negative and safety tanks are empty.

12. SURFACE CONDITION, EMERGENCY, DIVING TRIM designates the “diving trim” condition in which the main-ballast tanks, negative tank and safety tank are empty and the fuel-ballast tanks are filled with fuel oil or water ballast.

13. MANUFACTURER OF STORAGE BATTERIES.—The names of the battery manufacturers as listed are the make of the batteries currently installed. In view of the fact that batteries of the various makes are interchangeable, future replacement batteries may be of a different make from that listed.

14. FUEL OIL CAPACITY is given as 95% of the total capacity of *all tanks* on the vessel which carry fuel oil. This includes tanks designated as "fuel oil or ballast tanks" in which arrangements are provided for using tanks for ballast with salt water when empty of fuel oil.

15. DIESEL OIL CAPACITY is given as 95% of the total capacity of *all tanks* on the vessel which carry diesel oil.

16. GASOLINE CAPACITY is given as the total gasoline capacity of all tanks on the vessel which carry this liquid. This is approximately 95% of tank capacity.

17. ARMAMENT.—In a number of instances, as will be noted from footnotes, the ultimate approved armament has been given rather than that installed on the vessel. In these cases, where information as to the armament installed on a vessel is desired, the latest edition of the Armament Summary issued by the Bureau of Ordnance should be consulted.

Data regarding 20 mm mounts and smaller guns which have not been included in this edition, may be obtained from the Bureau of Ordnance Armament Summary.

18. DESIGN SHAFT HORSEPOWER is the total power installed in the vessel which can be delivered continuously to the shaft or shafts under designed operating conditions.

19. STEAM PRESSURES and TEMPERATURES given are under full power conditions at boiler (or superheater) outlet. Pressures are given in lbs./sq. in. G.; for boilers with superheat, temperatures are given in degrees F.; for boilers without superheat, temperatures are given as saturated.

20. TRIAL SPEED.—The speeds included are obtained from the standardization trials of certain vessels of the class at the designed shaft horsepower, unless otherwise specified. In cases where no trials have been run or where model tests were not made, speeds given are designed or maximum as indicated.

21. SHIP'S SERVICE GENERATORS.—The data given includes only those generators, exclusive of motor-generators, which are installed for the purpose of normally supplying general power and lighting. The following are therefore not included: Emergency generators, casualty generators, minesweeping generators, alongside power generators, submarine battery charging generators, and other generators used for special appliances.

22. SHIP'S SERVICE GENERATORS-VOLTAGE.—Where expressed "120/240 volt. D. C." or other similar combination, voltages of 120 volts D. C. and 240 volts D. C. are generated and not voltages ranging from 120 to 240.

23. TRIAL DISPLACEMENT.—Figure given is the average displacement of the ship during the standardization trials.

24. CONTRACT PRICE OF HULL AND MACHINERY.—For vessels built under cost plus fixed fee type of contract, the price shown represents return cost as reported with fee and bonus added or is the estimate for fee purposes with fee and bonus added. In the case of Navy Yard built vessels, the price shown represents return cost reported by the Yard or is the Bureau of Ships estimate as used in negotiations for similar type of vessels with private shipbuilders. In all such cases figures are rounded to the nearest ten dollars. Contract price as given for all other vessels except as otherwise specifically noted is for a fixed price contract based on either the original contract or the latest amended price available. For all Destroyer Escort Vessels, Submarines, and Aircraft Carriers 9 to 12, cost of main propulsion machinery is not included.

25. CONTRACT SIGNED.—The date given in the case of Navy Yard built vessels is that of the order except where otherwise noted.

26. DATE OF PRELIMINARY ACCEPTANCE is the date the vessel was delivered by the contractor and preliminarily accepted by the Navy. No dates are therefore given in this column for Navy Yard built vessels.

27. CONTRACT DATE OF COMPLETION, in the case of Navy Yard built vessels, is the date established by the Bureau for completion of the vessel.

28. All vessels are steel hulls except as otherwise indicated.

## LIST OF NAVAL VESSELS

The following list covers vessels of the types included in this volume which were on the Navy List in 1938 together with those which have been subsequently added thereto. It includes vessels at present in service, under construction, or authorized. Vessels which have been sunk, otherwise disposed of, or transferred in other categories are indicated by italics.

Group designs under the several classes are indicated either by braces or by appropriate headings.
