# THE STATISTICAL DIGEST OF THE WAR

#### Introductory

Early in the war the lack of regular comprehensive statistics was recognized as a real impediment to the war effort; smooth administration was impossible without such figures. In the summer of 1940, therefore, the Central Economic Information Service—a group of economists and statisticians within the War Cabinet Secretariat—began a series of statistical digests which assembled the information necessary for reviewing economic and other problems arising out of the war. In January 1941 the Central Economic Information Service was split into two sections—the Central Statistical Office and the Economic Section. The function of the Central Statistical Office was to collect from Government Departments regular series of figures on a coherent and well ordered basis covering the development of the war effort of the United Kingdom.

2. In planning the civil series of war histories the editor felt the need for a general statistical volume which would give the main statistical series illustrating the war effort of the United Kingdom. The individual civil histories on food, manpower, shipping, etc., will, of course, include a good many statistical tables; moreover, a great deal of statistical material about the war years has already been published. It would, however, be inconvenient if war statistics remained scattered among many volumes of history and many command papers. The Statistical Digest of the War has therefore been prepared by the Central Statistical Office in collaboration with the Statistics Divisions of Government Departments in order to bring together the salient facts of the British war effort so far as they are capable of statistical measurement.

#### General Notes

- 3. Area covered. Except where otherwise stated all statistics relate to the United Kingdom of Great Britain and Northern Ireland.
- 4. **Period covered.** In general the figures given in the Digest cover the period from September 1939 to August 1945. In some tables, however, figures for a pre-war year or years have been given where the comparison seems particularly valuable.
- 5. Time series. The Digest has no standard time series. Where possible annual totals are given throughout, but in many cases these are supplemented by quarterly totals, monthly averages and weekly averages according to the type of series dealt with. Except where it is stated to the contrary all statistics are for calendar years ended 31 December.
- 6. Change of basis. A line drawn across a column between two consecutive figures normally indicates that the figures above and below the line have been compiled on different bases and are not strictly comparable. In each case a footnote is added indicating the nature of the difference.
- 7. Consumption and stocks. Statistics of consumption and stocks should be used with particular caution. Figures given under the heading of "consumption" or "total disposals" are usually derived from statistics of releases from stocks by controls or manufacturers.

Figures of stocks may be affected to some degree by seasonal influences. Moreover, these figures often relate to only part of the total stocks in the country.

- 8. Definitions. In order to make this Digest as self-contained as possible a Definitions Section is included at pages 209 to 237. The purpose of the notes and definitions given in this Section is to supplement the various footnotes given in the tables and to make it possible to interpret the figures fully without reference back to the basic sources of the statistics. It is important that each table should be read in conjunction not only with the footnotes appended to it but also with the appropriate paragraphs in the Definitions Section.
- 9. Rounding of figures. Where necessary, each figure has been rounded off to the nearest final digit. For this reason there may be in some tables an apparent slight discrepancy between the sum of the constituent items and the total as shown.
- 10. Symbols employed. The following symbols have been used throughout the Digest:
  - .. = not available
  - = nil or negligible (less than half the final digit shown)
    - \* = five week period

Central Statistical Office, Great George Street, London, S.W.1.

October, 1950.

# UNITS OF MEASUREMENT

# I. British units of measurement and their metric equivalents

В	British unit	Metric equivalent						
Length 1 inch (in.) 1 foot (ft.) 1 yard (yd.) 1 mile	= 12 inches = 3 feet = 1,760 yards	2·54 30·48 91·44 1·60934	centimetres centimetres centimetres kilometres					
Surface  1 square foot (sq. ft.) 1 square yard (sq. yd.) 1 acre 1 square mile (sq. mile)	= 9 square feet = 4,480 square yards = 640 acres	0·09290 0·83613 40·47 258·99	square metres square metres ares hectares					
Capacity 1 Imperial gallon (gall.) 1 bulk barrel	= 4 quarts = 36 gallons	4·546 1·63655	litres hectolitres					
1 cubic foot (cu. ft.) 1 cubic yard (cu. yd.)	= 27 cubic feet	0·02832 0·76456	cubic metres					
Weight  1 ounce avoirdupois (oz.)  1 pound avoirdupois (lb.)  1 hundredweight (cwt.)  1 long ton  1 short ton	= 16 ounces = 112 pounds = 2,240 pounds = 2,000 pounds	28·35 453·59 50·80 1·01605 0·90718	grammes grammes kilogrammes metric tons metric tons					

# II. Miscellaneous units

Butter Cheese Condensed milk	5,600 gallons milk = 1 ton butter (average) 2,240 gallons milk = 1 ton cheese 600 gallons milk = 1 ton full cream condensed milk
Dried egg Eggs Milk Milk powder	660 gallons skimmed milk = 1 ton skimmed condensed milk 81,000 eggs = 1 ton dried egg 17,400 eggs = 1 ton 1 million gallons = 4,600 tons 1,800 gallons milk = 1 ton full cream milk powder
Sugar	2,400 gallons skimmed milk = 1 ton skimmed milk powder 100 tons raw sugar = 93 tons refined sugar
British thermal unit (B.Th.U.) Therm Unit of electricity	The amount of heat required to raise 1 lb. of water through 1 degree Fahrenheit at or near 39·1 degrees Fahrenheit. 100,000 British thermal units  An output of 1 kilowatt over 1 hour
Deadweight tonnage Gross tonnage Net tonnage Standard displacement War load displacement	These terms are defined in the Definitions Section (pages 225 and 229)
Softwood Pitwood	1 standard = 165 cubic feet 1 standard = 180 piled cubic feet
	Cheese Condensed milk  Dried egg Eggs Milk Milk powder  Sugar  British thermal unit (B.Th.U.) Therm Unit of electricity  Deadweight tonnage Gross tonnage Net tonnage Standard displacement War load displacement  Softwood

(1) The total population includes all members of the armed forces and Merchant Navy whether at

home or overseas.
(2) Estimated population actually in the country (resident population). The figures exclude members of the armed forces serving overseas and merchant seamen at sea estimated at about a quarter of a million at June 1939.

(3) The civilian population excludes members of the armed forces serving at home and abroad; it includes all members of the Merchant Navy.
(4) From 1943, excluding certain classes of seamen previously included. The numbers so excluded at that date were: England and Wales, 122,000; Scotland, 26,000; Northern Ireland, 3,000.

 <sup>(</sup>¹) Excluding men and women locally enlisted abroad. Figures for the Army and A.T.S., however, include those whose documents are maintained in the United Kingdom.
 (²) Excluding men serving with the Royal Navy on T.124 agreements (and variants), but including Royal Marine Police.
 (³) From January 1945 including intake into the Royal Navy from Deferred List.
 (⁴) From June 1945 including Class A and B releases.
 (⁵) Including about 485,400 mobilized and embodied at the outbreak of war.
 (⁶) The number of prisoners repatriated exceeded casualties.

<sup>(1)</sup> Workers on holdings of more than one acre. Excluding the occupier, his wife and domestic servants, but including relatives of the occupier (or of his wife) who work on the holding, members of the Women's Land Army, members of H.M. Forces, prisoners of war, etc., but not school children.

Source: Agricultural Departments

<sup>(2)</sup> Including before June 1944, in the case of England and Wales, and December 1945 in the case of Scotland, prisoners of war and members of the Women's Land Army employed as regular workers but not then returned separately. For subsequent dates they are included only in the figures for all workers

figures for all workers.

(3) The figures include all those in full-time employment in agricultural, horticultural and timber work.

# Numbers employed in engineering and metals (1), explosives and chemicals and shipbuilding industries (2)Great Britain

Clothing	13	40	16	19	7	5	68
Transport and communications	56	13	54	35	181	85	1,491
Other industries and services	112	66	43	30	54	27	89
	A						10000

Stoppages involving fewer than ten workers or lasting less than one day have been omitted except when the aggregate number of working days lost exceeded 100.
 The figures relate to stoppages beginning in the years shown and the figures for working days lost include days lost in subsequent years where the stoppage extended into the following calendar

year.

(a) This analysis shows the total working days lost within each year as a result of stoppages in progress in that year whether beginning in that or an earlier year.

### III. SOCIAL CONDITIONS

<sup>(1)</sup> Great Britain.
(2) The opencast production figures have not been adjusted to allow for subsequent losses in stocking nor for some coal of inferior quality not included in the stock figures for the later

stocking nor for some coal of inferior quality not included in the stock figures for the later periods.

(\*) Including shipments to Northern Ireland. Up to December 1942, computed from figures for calendar months.

(\*) Computed from figures for calendar months. The figures include bunkers for fishing vessels proceeding outside territorial waters, but exclude coastwise bunkers.

(5) A large proportion of the coal which was held by collieries in these years was of very inferior quality.

\* Average of five weeks.

<sup>(1)</sup> Excluding consumption of coal at waterworks, which amounts on an average to 8,000 tons

per week.

Undertakings with an annual consumption of 100 tons or more of coal and/or coke.

Calculated from four-weekly or monthly figures until December 1942; from then onwards figures are on a four or five-week basis.

(6) Including shipments to Northern Ireland, and consumption by Service departments and

\* Average of five weeks.

<sup>(4)</sup> Authorized electricity undertakings and railway and transport authorities only.
(5) Including disposals to shops, offices and other establishments, partly or entirely non-residential, with an annual consumption of less than 100 tons of coal and/or coke. Including landsale deliveries until December 1942.

<sup>(7)</sup> In June 1942, a revised form of return was instituted, designed to cover all controlled premises, including industrial consumers with an annual consumption of less than 100 tons. On the old basis the figure for June 1942 was about 701,000 tons.

Great Britain.
Undertakings with an annual consumption of 100 tons or more of coal and/or coke.
Including coal held by Service departments.
From November 1941 coal held in wagons at the sidings of the gas, water and electricity undertakings and in barges alongside power stations is included. At the end of November the stocks in these categories were estimated to be 50,000 tons for gas and 55,000 tons for electricity.

<sup>(1)</sup> Great Britain.
(2) Up to and including 1942, the figures are obtained from returns collected by the Joint Accountants to the industry for the purpose of wages ascertainment.
(3) The introduction of a revised form of return in November 1942 resulted in a net increase of about 1,250 in the total wage-earners.
(4) Owing to the introduction of a revised form of return the figures are not comparable with those for previous years. On the old basis the figures for 1943 are: shifts worked, 5·24; shifts possible, 5·96; absenteeism percentage, 12·06; average output, 2·86; percentage of shifts at the coal face, 35·94.

\* Average of five weeks.

(3) Based on calendar months.

Including industrial spirit. The analysis of deliveries by consumer categories is based on total coupon issues. No adjustments have been made for non-use or misuse of coupons.
 During the period June 1942 to May 1945, the figures in this column relate to supplementary rations for domestic purposes only. The higher figures for June to October 1942 reflect the completion of the consumption of the last basic ration issue.

<sup>(1)</sup> Raw and calcined ore as charged, except in the case of the figures of home iron ore in 1937 and 1938 which relate to raw and raw equivalent of calcined ore.
(2) Including consumption in sinter plant.
(3) Production and consumption figures relate to calendar years for 1937, 1938 and 1939, to a period of 53 weeks for 1942 and to periods of 52 weeks for the remaining years.
(4) Including consumption of manganese ore. Excluding consumption in steel works. The average weekly consumption of both home and imported ore in steel works amounted to 15,300 tons in 1937 and 11,400 tons in 1938.

\* Average of five weeks.

<sup>(1)</sup> Including production of blast furnace ferro-alloys and other qualities of pig iron.
(2) Including refined pig iron consumed in iron foundries.
(3) Including stocks at wrought iron and refined iron works and Ministry of Supply stockyards.
(4) Production and consumption figures relate to calendar years for 1937, 1938 and 1939, to a period of 53 weeks for 1942 and to periods of 52 weeks for the remaining years.

\* Average of five weeks.

<sup>(1)</sup> From 1943, including scrap refined on private account.
(2) From 1942, including consumption other than for zinc production.
(3) Some secondary material is included in the years 1935 to 1939.
(4) English refined lead is included in consumption figures from 1942 and in stocks figures throughout.
(5) From 1935 to 1940, excluding consumers' stocks. The figure for 1941 is estimated.
(6) In terms of high grade bauxite.
(7) Including scrap recovery.
(8) Government stocks only.
(9) These figures refer to magnesia extracted from sea-water.

<sup>(1)</sup> Excluding sleepers of all kinds except in figures for production before 1942.
(2) In the figures for production after 1941 and in all figures for consumption of home-grown timber an allowance of 10 per cent. (softwood) and 5 per cent. (hardwood) has been made for conversion to square edged material.
(3) Standards of 165 cubic feet.

<sup>(1)</sup> Crumb is included in waste rubber in 1942. In 1943 it is included in the monthly figures for reclaimed rubber but not in the annual figures. Thereafter it is excluded from the table.
(2) Monthly figures for 1942 exclude latex and exports.
(3) Excluding "Novoplas" and "Thiokol" from July 1944 onwards.
(4) Waste rubber collected.
(5) Processed into reclaimed rubber.
(6) Until June 1944, including direct usage of waste rubber.
(7) Up to and including May 1942 computed from figures relating to calendar months.
(8) Excluding Government lend-lease stocks.
(9) From July 1944 the figures relate only to Government waste depots.
\* Average of five weeks.

 <sup>(</sup>¹) Years ended 30 June, except for phosphate rock, ammonia and molasses.
 (²) For agricultural uses only except in the figures for total disposals which include exports of ammonium sulphate for all purposes.

ammonium sulphate for all purposes.

(3) Agricultural potash.

(4) Total weight of product. Excluding concentrated compound fertilizers. The nitrogen, P<sub>2</sub>O<sub>2</sub> and, for consumption, K<sub>2</sub>O content are included under appropriate headings above.

(5) Estimated.

(6) For agricultural and industrial purposes.

(7) Excluding ammonia produced in by-product factories and converted directly into ammonium sulphate.

(8) Including consumers' stocks.

(9) In terms of blackstrap containing 52 per cent. sugars.

(10) Year ended 30 September.

<sup>(1)</sup> Series for wool tops relate to periods of 52 weeks.
(2) Estimated clean weight.
(3) Figures relate to beginning of September in 1939 and to 31 July in other years.
(4) Clean scoured weight.
(5) Years ended August.
(6) Production of yarn wholly or mainly of wool, including admixtures amounting to about 5 per cent.

<sup>(1)</sup> This table does not incorporate certain revisions which have been made to figures since the end of the war as the revisions cannot be made in the full detail required by this table. In addition to vessels built in the United Kingdom, the following vessels were built on British account in the Commonwealth and United States of America:—

	Number	Thousand gross tons
1941 : Total	11	77-3
Canada	1	7.2
Hong Kong	5	34.3
United States of America	5	35.9
1942: Total	56	401.8
Canada	1	7.2
United States of America	55	394-6

<sup>(2)</sup> Including merchant-type vessels built for the Navy as follows: In 1941 4,000 gross tons non-tanker (all of 100-1,599 gross tons); 20,000 gross tons tanker (all of over 1,600 gross tons); in 1942 8,000 gross tons non-tanker (all of 100-1,599 gross tons); and in 1943 1,000 gross tons tanker and 63,000 gross tons non-tanker.

<sup>(3)</sup> Including two suction dredgers of 3,944 and 1,747 gross tons.

## Shipbuilding

<sup>(1)</sup> In addition to the classes of vessel shown below, passenger liners of 98,000 gross tons were completed in 1940.
(2) These vessels are mostly of about 7,000 gross tons and 10,000 deadweight tons.
(3) Including dredgers from May 1943.
(4) Including four vessels totalling 56,800 gross tons handed over to the Royal Navy.
(5) Including one cable ship.

Vessels under the British flag and those under foreign flags on time-charter to the United

Vessels under the British flag and those under foreign flags on time-charter to the Kingdom.
 A substantial number of vessels carrying military cargoes on outward voyages returned to the United Kingdom with civil cargoes. Such vessels are shown according to their actual employment on the dates to which the figures relate.
 Of United Kingdom and Eire.
 War developments made changes in classification necessary after September 1942. For the period covered by this part of the table the figures for vessels under British control exclude foreign flag vessels on time-charter and allocated for use by the United States of America, but include foreign vessels on time-charter to the United States of America and allocated for use by the United Kingdom. For this reason the figures vary slightly from those for the corresponding period in Table 153.

The difference between the figures for losses of vessels of 1,600 gross tons and over given in this table and those given in Tables 156 and 157 is explained in footnote (1) to Table 156.
 3 September 1939 to 2 September 1945.
 To 2 September 1945. There were no sinkings of merchant ships anywhere between 8 May and 2 September 1945.

(1) The monthly and quarterly figures of imports given in this and in the next two tables represent the estimated weights of the commodities included in the Trade and Navigation Accounts for each month, and are unadjusted for small revisions subsequently made in the cumulative totals given in the Accounts for later months. From September 1939 to August 1940, imports from Eire are included under Departmental programmes.

(2) Including imports of munitions on Canadian Government account from January 1943.

(3) Petroleum products, molasses, unrefined whale oil and industrial alcohol. From January 1943 acctone is included. From January to May 1945, a further 760,000 tons of petroleum products were shipped direct to the Continent under this programme.

(4) Adjusted for revisions. The figures for 1944 exclude approximately 36,000 tons of food and 23,000 tons of munitions destined for Europe and 104,000 tons of timber as a replacement of supplies delivered to the United States Army, since these amounts were not provided for in the United Kingdom import programme. the estimated weights of the commodities included in the Trade and Navigation Accounts for

the United Kingdom import programme.

The figures of actual imports in 1945 exclude about 179,000 tons of cereals and oilseeds which have been shipped direct to the Continent, a corresponding amount having been transferred to United Kingdom stocks from S.H.A.E.F. emergency reserves held in this country. On the other hand, about 58,000 tons of foodstuffs intended for relief stockpile and 22,000 tons of softwood imported in repayment of a loan to the United States Army are included.

Source: Bank of England

<sup>(\*)</sup> Averages of working days, allowing for accrued interest. In calculating the yields for short-dated and medium-dated securities redemption is assumed at the later date if price is below par and at the earlier date if price is above par. For 3½% War Loan a flat yield is taken if price is below par and redemption is assumed in 1952 if price is above par. For 2½% Consols a flat yield is taken throughout. Income tax is neglected in calculating the yields.

(\*) Representative securities changed from time to time, namely: Short-dated: 5% Conversion Loan 1944-64 in 1935 to 1940; 2½% National War Bonds 1945-47 in 1941 and 1942; 2½% National War Bonds 1949-51 in 1943 and 1944; 2½% National War Bonds 1952-54 in 1945. Medium-dated: 4% Funding Loan 1960-90 in 1935 to 1940; 3% War Loan 1955-59 in 1941 and 1942; 3% Savings Bonds 1960-70 in 1943 to 1945.

(1) The greater rise in the basic materials index is essentially due to its containing various items such as paper-making materials, which rose very greatly in price and for which there were no corresponding quotations available under intermediate products or manufactured articles; similarly the index for intermediate products is raised above that for manufactured articles mainly because it includes timber.

(2) Selected items included in the indices for industrial materials and manufactures.

### DEFINITIONS AND EXPLANATORY NOTES

The purpose of this section is to supplement the footnotes given in each table and to make it possible to interpret the statistics more fully. The notes and definitions in this section are arranged in the same order as the tables. Certain definitions of general application throughout the Digest are also given in the Introductory Notes on page v.

### I. POPULATION AND VITAL STATISTICS

### Table

to

3

### POPULATION

For 1939 all figures for the population of the United Kingdom refer to the population actually in the country (resident population): they exclude members of the armed forces serving overseas and merchant seamen at sea. The number so excluded is estimated at about a quarter of a million at June 1939.

The figures for total population include from 1940 all members of the armed forces and merchant navy whether at home or overseas.

### VITAL STATISTICS

#### 4 Births

Figures for England and Wales relate to births occurring during the year; those for Scotland and Northern Ireland relate to the number of births registered in each year.

Birth rates have been calculated as follows :-

- (a) For 1939 by relating birth registrations (occurrences in the case of England and Wales) to the resident population, that is excluding members of the armed forces overseas and merchant seamen at sea.
- (b) From 1940 by relating birth registrations (occurrences in the case of England and Wales) to the total population, including members of the armed forces overseas and merchant seamen at sea.

### Table

### 5 Reproduction rates

Reproduction rates are an indication of the extent to which the female population of child-bearing age is being replaced by births. A rate of 1 represents exact replacement. In the "gross" rate no allowance is made for the losses due to death before completion of the child-bearing period. The "effective" and "net" rates both make provision for such losses but while the "effective" rate used for England and Wales assumes a continued improvement in mortality, the "net" rate used for Scotland is based on the mortality experienced in the year of calculation.

### 6 Infantile mortality

For England and Wales the rates of deaths of infants under one year of age are based on live births occurring in the several periods to which the deaths in the age groups comprising the first year of life relate. For Scotland and Northern Ireland the rates are based on live births registered in the year in which the deaths took place.

### 7 Deaths

The figures relate to the number of deaths registered during the year, the normal time lag between occurrence and registration being a matter of days only.

The figures for male deaths refer to civilians only for England and Wales and Scotland from 3rd September 1939 and for Northern Ireland from 1941.

The figures for female deaths refer to civilians only for England and Wales and Scotland from 1st June 1941 and for Northern Ireland from January 1941.

### II. MANPOWER

### 9 Distribution of total manpower

The figures represent estimates of the total number of males aged 14-64 and females aged 14-59 gainfully employed, whether employers, employees or persons working on their own account, together with those who had not yet taken up employment since leaving H.M. Forces and insured persons registered as unemployed. Indoor private domestic servants are excluded. Women in part-time paid employment are included, two part-time workers being counted as equivalent to one full-time worker. The figures exclude prisoners-of-war but include such other foreign workers as had entered individually into civilian employment.

The heading "National Government Service" covers all employees of the Government except those employees in dockyards, royal ordnance factories, etc. who are included in their appropriate industry

classifications. It also includes British employees of N.A.A.F.I.

### ARMED FORCES

The figures in Tables 10 to 15 relate to men and women who served in the armed forces and auxiliary services of the United Kingdom, British subjects usually domiciled in Great Britain and Northern Ireland. Certain of the tables, annotated accordingly, include British subjects and other persons domiciled elsewhere who individually enlisted and served in the armed forces and auxiliary services of the United Kingdom.

All tables exclude men and women who served in units and contingents of His Majesty's forces other than those of the United Kingdom or in Allied units and contingents under British or Allied command.

10 Strength

The term "strength" includes only those actually serving, that is, it excludes men whose service had been deferred, men on Reserve, men released to industry and, except where otherwise stated, men reported prisoners-of-war or missing. It excludes women whose service had been deferred and except in 1941, the A.T.S. Unemployed List.

Men on T.124 agreements were merchant seamen serving with the Royal Navy under special agreements.

The nursing services include Queen Alexandra's Royal Naval Nursing Service, Queen Alexandra's Imperial Military Nursing Service, Territorial Army Nursing Service, Princess Mary's Royal Air Force Nursing Service and members of Voluntary Aid Detachments serving with the armed forces.

#### 12 Casualties

and 14 Casualties are given by date of notification and not by date of occurrence. The strength figures for the Army include a number of casualties which had not been reported at the dates to which the figures relate.

Casualties include the following categories :-

- (a) Killed. Deaths from enemy action and injury are included, but not deaths from natural causes or (except in the case of the Royal Air Force) suicides. The figures for the Royal Navy, however, include deaths from diseases attributable to war service.
- (b) Wounded. Non-battle injuries sustained on war service are included, but absence from duty due to sickness is excluded. The Army exclude all non-battle injuries and the Royal Air Force include injuries occurring during training.
- (c) Missing.
- (d) Prisoners-of-war and internees. The figures for prisoners in Europe were based on official notifications received from Germany and Italy. The figures for prisoners in Japanese hands were based partly on official notifications and partly on information received from the prisoners themselves.

In Table 12 the number of casualties represents those notified during the period less the missing who subsequently rejoined their units and repatriated prisoners. In Table 14 these two categories are included and the figures for prisoners-of-war also include internees. Men reported missing but subsequently reported killed, wounded or prisoners-of-war have been transferred from "missing" to the other category.

The figures relate to the gross number of casualties and not to the number of men who became casualties. A man who was reported missing, wounded or prisoner-of-war more than once has been counted as a casualty on each occasion so reported.

### 13 Releases

Men and women released for a temporary period are excluded, but those released locally abroad or repatriated from the United Kingdom are included. Table

The scheme of release from the forces after the end of hostilities of men and women called up under the National Service Acts provided for release in the following classes:—

- (a) Class A in which release was based on age and length of service.
- (b) Class B in which out-of-turn release was offered to men and women for employment in certain occupations essential to the reconstruction programme.
- (c) Class C in which release was granted for an indefinite period on compassionate grounds.

Releases are counted from the date of dispersal and not from the date of completion of the period of paid leave.

### CIVILIAN EMPLOYMENT

18 Agriculture

The table shows the number of workers (excluding occupiers and their wives, domestic servants and children still at school) employed on the day of the census on agricultural holdings of more than one acre in Great Britain.

Regular workers absent through sickness or holidays and working partners of the occupier are included.

Casual labour includes contract work, that is, labour supplied by County War Agricultural Executive Committees, contractors, etc., and all regular part-time agricultural workers, including those temporarily away through sickness or holidays.

The figures for the Women's Land Army relate to those in full-time employment in agriculture, horticulture and timber work.

19 Manufacturing industries

to The mid-30 insured w

The mid-year figures are based on the numbers of insured workers in each industry as estimated from the annual exchange of unemployment insurance books, less those registered as unemployed, together with one-half of the number of part-time female workers. The subsequent quarterly figures are obtained by application of the percentage changes in the numbers employed derived from the returns rendered by employers under various Orders made between 1940 and 1943, the last of the series being the Undertakings (Records and Information and Inspection of Premises) Order, 1943. The figures thus exclude employees over insurable age (65 for men and 60 for women), the relatively small number of nonmanual workers whose earnings were above the salary limit for unemployment insurance, the employers themselves (proprietors, directors, partners, etc.) and persons working on their own account. Earlier figures have been adjusted to include an allowance for the extension of the salary limit for unemployment insurance from £250 to £420 per annum which came into force in September 1940 and to exclude women aged 60-64 who ceased to be insurable in July 1940.

The allocation between orders for Supply departments (Admiralty, Ministry of Supply and Ministry

of Aircraft Production), home market and export has been made on the basis of figures supplied by employers in the employment returns referred to above. Employment on orders for Supply departments relates only to munitions and other equipment and stores for the use of the armed forces. Merchant shipbuilding and repairs is included in home market.

It should be noted that the figures shown for particular industries do not necessarily include the whole of the employment in the manufacture of the finished product; for example, part of the employment in the manufacture of aircraft parts and equipment is included in the general engineering, electrical engineering, scientific instruments, etc., industries.

31 Railway staff

The table shows all staff employed during the week of the census in March of each year by the railway companies of Great Britain (excluding the Manchester Ship Canal where staff fluctuated between 1,500 and 1,600 during the period), the London Passenger Transport Board and the Railway Clearing House. The figures represent the numbers receiving salaries or wages for the full week combined with the equivalent number of full-time workers where employees were paid for less than the complete week.

32 Civil Service

and

33

38

The tables include both established and unestablished staff irrespective of their industrial classification. Staff in Northern Ireland, other than reserved and agency services, is excluded. Two part-time workers are counted as one whole-time worker. The figures are taken from returns made quarterly to the Treasury by all Government departments.

The table of non-industrial civil servants relates to clerical, executive and administrative staffs, their professional and technical counterparts and Post Office manipulative grades (postmen, telephonists, etc.).

In the case of industrial staff, in so far as they are employed in establishments which carry on work similar to that performed by employees of private firms (for example, engineering, building, etc.), they are also included in the tables for the particular industries concerned.

4 Government building programme

The table shows the labour employed on that part of the building programme subject to direct Government Table

control. The figures cover male operatives aged 16 and over employed on the following types of work:—

- (a) direct, authorised and assisted work of a Government department;
- (b) licensed work;
- (c) repair of houses made uninhabitable by war damage; salvage operations and war debris clearance; and first aid repairs carried out by the Special Repair Service.

"Direct" work is work on Government-owned property. "Assisted" work is work for which the Government granted financial assistance. "Authorised" work is work of construction or alteration for local authorities and public utility undertakings which required to be authorised by the appropriate Government department. Repair and maintenance work for such authorities and undertakings and items of new work under £100 in value were exempted from authorisation.

Work for private firms, private institutions and individuals required to be licensed with the exception of items of work of a value below £100 and, until the end of 1941, all works of demolition, repair, decoration and maintenance.

The exemption limit of £100 for authorised and licensed work was reduced to £10 in the London Civil Defence Region in October 1944 and in certain other districts of the Home Counties in February 1945.

35 Government training centres and emergency training establishments

The table relates to the number of civilians trained or in training at Government training centres (excluding coal-mining training centres) and emergency training establishments. The latter utilised for training purposes all facilities available at technical colleges and industrial establishments not being used in operations essential to the war effort. The figures for completed training include all persons who completed the course in Government training centres together with terminations after passing the placing test in emergency training establishments. Trainees were required especially under schemes conducted by industrial establishments to undergo a placing test before completion of the course of training. These courses were of fixed duration, varying with the type of training required, but normally of eight weeks'

### III. SOCIAL CONDITIONS

### PUBLIC HEALTH

37 Deaths by cause and age and The figures are tal

The figures are tabulated according to the Fifth Revision of the International List of Causes of Death from 1940 for England and Wales and Northern Ireland and from 1941 for Scotland. The figures for 1939 (and 1940 in the case of Scotland) are tabulated according to the Fourth Revision of the International List. The figures in brackets following each cause of

death are the reference numbers to that particular cause in the Fifth Revision of the International List.

39 Notifications of infectious diseases

The figures for the years 1939 to 1943 for England and Wales incorporate such corrections as were reported on the weekly card returns and correspond with the numbers published in the quarterly and annual reports of the Registrar General. Those for 1944 and 1945 show the corrected number of notifications,

### SOCIAL CONDITIONS

Table

and

incorporating revisions of diagnosis, either by the notifying medical practitioner or by the medical superintendent of the infectious diseases hospital.

The term "formal notifications" as applied to cases of tuberculosis in England and Wales and Scotland covers new cases notified under the Public Health (Tuberculosis) Regulations, 1930. The figures exclude transfers between areas so far as they could be ascertained, duplicate notifications and a few cases brought to the notice of Medical Officers of Health otherwise than by formal notification under the regulations.

#### 40 Venereal disease

The table shows the number of cases of venereal disease dealt with at civilian treatment centres in Great Britain and includes cases from the Services. The totals of all cases comprise cases under treatment or observation on 1st January of each year, cases removed from the register during any previous year which returned during the year in question for treatment of the same infection, new cases and cases dealt with for the first time during the year in question and known to have received treatment for the same infection or to have been under observation at other centres or Service hospitals.

In the number of new infections with syphilis are included cases of syphilis primary, secondary, latent in first year of infection, all later stages and congenital. New infections with gonorrhoea include cases at first year of infection and at later stages.

### NATIONAL INSURANCE

41 National health insurance and pensions

The various enactments relating to national health insurance, widows', orphans' and old age contributory pensions and old age non-contributory pensions were consolidated in the National Health Insurance Act, 1936, the Widows', Orphans' and Old Age Pensions Act, 1936 and the Old Age Pensions Act, 1936 respectively. Similar legislation applies to Northern Ireland.

Persons insured for health and pensions comprised broadly the following classes:—

(a) Persons employed under contract of service by way of manual labour or (if non-manually employed) remunerated at a rate not exceeding £250 per annum up to 4th January 1942 and £420 thereafter. Seamen on foreign-going British ships are included.

There are numerous exceptions in so far as national health insurance is concerned, the most numerous being civil servants, many employees of local authorities, railway companies and other statutory companies or undertakings, teachers covered by the Teachers Superannuation Acts, etc. Most of these excepted categories were, however, insured for pensions.

(b) certain classes of persons not employed under contract of service, for example, outworkers, manual labour contractors, share fishermen Table

45

to

52

and taxi drivers plying for hire with vehicles obtained under contract of bailment.

(c) soldiers, sailors and airmen.

- (d) persons employed in certain classes of war occupation abroad.
- (e) voluntary contributors.

#### 42 Unemployment insurance

Persons insured against unemployment under the Unemployment Insurance Acts were broadly the categories indicated at (a) and (d) above for national health and pensions insurance with the following exclusions: (i) private domestic servants, (ii) female professional sick nurses and (iii) from 1942 persons engaged as a result of the war in employment for less than 30 hours a week.

#### JUSTICE AND CRIME

It is necessary to preface these tables with the warning that differences exist in varying degree between the legal and judicial systems of England and Wales, Scotland and Northern Ireland which make it impossible to collate the statistics on a completely comparable basis. The differences between the systems of England and Wales and Scotland are the most pronounced.

### Classification of offences

In all the relevant tables in this section offences are analysed under three broad headings. For England and Wales and Northern Ireland these are: (a) indictable offences, (b) non-indictable offences, and (c) offences against Defence Regulations; for Scotland they are: (a) crimes, (b) miscellaneous offences, and (c) offences against war legislation. Generally speaking these groups are broadly comparable.

The first two groups represent a division of criminal offences according to the nature of the proceedings in which the accused persons are tried. Thus, the procedure at Courts of Assize and Quarter Sessions is by a "bill of indictment" as opposed to a summons, warrant or charge at summary courts; therefore all offences which in the ordinary course are tried at Assize or Quarter Sessions are called "indictable" offences. All common law offences and all offences created by statute are indictable unless there is some statutory provision which expressly provides for some other mode of disposal. Originally, indictable offences could be tried at Assize or Quarter Sessions only, but there are now many offences committed by adults which may be dealt with summarily with the consent of the person accused. Offences which are ordinarily within the jurisdiction of summary courts only are designated "non-indictable" offences; such offences are created by statutes which contain express provision for summary treatment.

The last mentioned group (offences against Defence Regulations or war legislation) is of course a temporary one which came into existence during the war years and which arose out of the emergency powers taken by the Government to prevent acts which might be

45

to

47

48

to

50

prejudicial either to the country's security or to the prosecution of its war effort. The difference in nomenclature of this group as between England and Wales and Northern Ireland on the one hand and Scotland on the other, is that the Scottish figures, in addition to covering offences under the various regulations made under the Emergency Powers (Defence) Acts, 1939 and 1940 (Defence Regulations), include offences under the National Registration Act, 1939, War Charities Act, 1940 and Goods and Services (Price Control) Act, 1941 which are included under non-indictable offences in the case of England and Wales and Northern Ireland.

Finding of guilt and conviction

In the statistics for England and Wales the term "persons found guilty" covers not only persons convicted but also those found guilty without conviction (mainly persons dealt with under the Probation of Offenders Act, 1907 by dismissal, binding over or placing on probation). In the statistics for Scotland, however, persons so dealt with are not included in the term "persons convicted or found guilty" since there is in Scotland neither finding of guilt nor conviction in such cases.

Offences known to the police; persons proceeded against and found guilty

Offences known (or made known) to the police include offences reported to the police or otherwise coming to their knowledge within each year whether committed by the same or different persons and whether any apprehension took place within the same year or not.

A person proceeded against and charged at the same time with several offences appears as one person only. In selecting the offence for tabulation the principle is followed that a charge resulting in conviction has preference over any others, and where there are convictions on more than one charge the most serious offence (that is, the offence for which the heaviest sentence is awarded) is selected. Only cases disposed of within each year are included. Cases pending at the end of a year are included in the figures for the following year.

Juvenile delinquency

For England and Wales and Scotland "juveniles" are defined as children or young persons under the age of 17; for Northern Ireland, however, the age limit is under 16 years.

51 Prison population

The prison statistics for Scotland are not altogether comparable with those for England and Wales and Northern Ireland. The main difference is in respect of the inclusion of criminal lunatics and mental defectives in the statistics for Scotland. In England and Wales and Northern Ireland the institutions in which criminal lunatics and mental defectives are detained do not come under the control of the Prison Commission, though the prison statistics may include such persons if received as ordinary prisoners before removal to the appropriate institution either by order of a court or by certification.

Table 52

Divorce proceedings

During the years 1937 to 1939 new legislation relating to divorce was introduced which had a marked effect on the number of petitions filed. In England and Wales the Matrimonial Causes Act, 1937 came into effect on 1st January 1938 and gave additional grounds for divorce. The Divorce (Scotland) Act, 1938 gave additional grounds for divorce and also lowered the period of desertion necessary as a ground for divorce from four to three years.

The Matrimonial Causes Act (Northern Ireland), 1939 came into operation on 1st October 1939 and instituted a judicial for a legislative system of divorce. Before this Act the High Court of Justice in Northern Ireland had power to grant a decree of divorce a mensa et thoro, but such a decree did not dissolve the marriage and amounted only to what is known elsewhere as a judicial separation.

### HOUSING AND BUILDING

54 Construction activity

This table shows the estimated value of work (both new work and repairs and maintenance) carried out by firms registered in the twelve main trades of the building and civil engineering industries; namely, general builders, building and civil engineering contractors, civil engineering contractors, plumbers, joiners and carpenters, painters, roofers, plasterers, glaziers, demolition contractors, scaffolding specialists and miscellaneous. Firms in these twelve trades consisting solely of working principals and therefore employing no operatives are excluded; a working principal is an owner, partner or director who also works as a craftsman or labourer.

The table also excludes building and civil engineering work carried out by the following:—

- (a) firms in the seven specialist trades, namely: constructional engineers, reinforced concrete specialists, heating and ventilating engineers, electrical contractors, asphalt and tar spraying contractors, flooring contractors and plant hire firms.
- (b) building operatives employed directly by local authorities, Government departments, public utility and transport undertakings and by private firms outside the building and civil engineering industries.
- (c) prisoner-of-war labour.

The work done by the agencies excluded was, in 1946, about 40 per cent. of the total output of building and civil engineering work. This percentage is not known for earlier years.

The figures for mining include the cost of raising opencast coal, since such work was undertaken by firms in the building and civil engineering industries. The item "all other work" includes all housing work other than new construction and war damage repairs and all work on shops, commercial premises, farm buildings, etc.

### IV. AGRICULTURE AND FOOD

Table

55

and

56

### **AGRICULTURE**

Area of crops and grass

The statistics of area are obtained from returns made by all occupiers of more than one acre of agricultural land in Great Britain. In Northern Ireland returns are required from all occupiers of one-quarter of an acre or more of agricultural land. The areas shown exclude woodlands, buildings, roads, yards, ponds, etc.

The figures of specific crops relate to those which were actually in the ground on the date of the June census, or for which the land was being prepared at that date. Any catch crops grown for livestock feed or for ploughing-in in the period between the harvest and the sowing of the next season's main crop are not shown in the acreage returns. The case is similar for vegetable crops.

The number of acres under each crop was reported to the nearest quarter-acre. Any crops not specified in the return or grown in patches of less than one quarter of an acre are shown under the heading "Other crops".

The permanent grass acreage relates only to that grassland which was not under rotation.

57 Crops and grass harvested

The estimates of the quantity harvested were for the most part obtained by combining the areas returned in June with estimates of yields made by technical officers employed by the Departments of Agriculture.

Livestock

and

58

61

and

62

The tables show the number of cattle, sheep, pigs and poultry as returned by all occupiers of more than one acre of agricultural land in Great Britain and one quarter of an acre or more in Northern Ireland.

### FOOD

65 Movement off farms

Wheat, barley and oats

The series for wheat, barley and oats show as nearly as possible the sales of the home crops of these cereals as food. Thus no account is taken of farm sales specifically for animal feed, although small quantities were diverted for this purpose. The wheat figures show receipts by flour mills; the barley figures show receipts by brewers, maltsters, flakers, roasters, distillers, pot barley manufacturers, the Ministry of Food and (for a short period of 1943 and 1944 when flour was diluted) flour millers; the figures for oats are receipts by oatmeal millers (including a small quantity in 1943 for flour dilution), flakers and maltsters, and the Ministry of Food.

### Potatoes

The series shows the quantity of ware potatoes (excluding chat and seed) sold directly for food (including exports) and also for processing. The figures include the quantity of surplus ware potatoes

Table

fed direct to livestock under the Ministry of Food scheme or under special licences. Allowance has been made for human consumption on farms but production on allotments and gardens is excluded.

Sugar

The production of refined and raw sugar (in terms of refined) from home-grown sugar beet. In 1939 the average relates to "the campaign year"—October, 1939 to January, 1940.

66 Animals purchased for slaughter

The figures relate to the number of animals purchased by the Ministry of Food from farms in Great Britain including fat animals imported from Eire and Northern Ireland for slaughter in Great Britain. Pigs fattened by pig clubs or other domestic producers and killed under licence are excluded.

67 Milk sales through the marketing scheme

The figures cover sales through the marketing schemes, for liquid consumption and for the manufacture of milk products including farm cheese. The quantity consumed by farm households and used on farms for butter production or calf rearing is excluded.

### 68 Processed food: Production

Wheat and oat milling

The series under the heading "Flour milling" show the quantity of home-produced and imported wheat milled and the resulting output of flour and offals. The latter two series include also the small quantity of oats and barley used for the dilution of flour in 1943 and 1944. The figures for oats show the quantity used by oatmeal millers, flakers and maltsters.

Seed crushing and vegetable oil consumption

The five series show the quantity of oilseeds and nuts processed by crushing, expelling and extraction, the resulting production of crude oil and oilcake or meal and the consumption of the oil. The consumption figures include the crude oils used as such for soap and other industrial purposes, and the crude oil equivalent of the refined oils used for the manufacture of margarine and cooking fats and other food uses. Exports are included both in total disposals and in disposals for food. Castor meal, cocoa-cake and meal, which are unsuitable for animal feed, are excluded from the oilcake and meal figures.

Whale, herring and seal oil

Consumption is calculated on the same basis as that of vegetable oils.

Meat

Up to and including March 1940 the production of carcase meat and offal has been calculated from the estimated number of animals slaughtered. From April 1940 onwards the figures relate to sales by the wholesale meat supply associations and to meat and offal produced by pig clubs and other domestic producers. Meat from imported fat stock and fresh meat from Eire are included throughout.

#### Bacon and ham

The figures relate to the output of curing factories from both home-killed and imported carcases. Bacon cured for pig clubs or other domestic producers is included.

### Butter

The figures relate to the output of home creameries. The production of butter on farms is excluded.

#### Cheese

The series shows all graded cheese purchased by the Ministry of Food from creameries or farms. Processed cheese is excluded as being a remanufacture of graded cheese.

### 69 Food and animal feeding-stuffs: Consumption

The consumption figures relate to deliveries from stocks held or controlled by the Ministry of Food taking into account changes in stocks of wholesalers and manufacturing users. They should not be confused with retail purchases. In addition to deliveries to home food distributors, for civilians and for the Services, the figures include deliveries to manufacturers of products other than food and to exporters. Whenever these items are quantitatively important deliveries "for food" are shown separately. Where foods are used in the manufacture of other goods (for example, sugar in the manufacture of jam, biscuits, sweets) the quantities used for this purpose are included in the food column. The following points should be noted.

#### Rice

The series gives total disposals which in addition to issues of whole rice, include issues of broken rice to manufacturers for brewing and for the production of ground rice, inedible starch, etc., and losses in recleaning as well as milling and drying losses.

### Starch

The series includes the quantity issued to industrial users as well as that issued to glucose and other food manufacturers.

### Fresh, frozen and cured fish (landed weight)

Total disposals are the landed weight of fresh and frozen fish supplied to wholesalers, certain retailers and institutions, the Services, manufacturers of oil and fish meal and exporters, together with the quantity of cured fish issued to wholesalers, manufacturers and exporters. The condemned fish and offal which are included are taken by fishmeal manufacturers for the production of fertilizers and animal feed.

The figures for disposals for food in the United Kingdom give the landed weight of fresh and frozen fish and net weight of home-cured fish, but exclude quantities supplied to exporters and fish taken by fishmeal manufacturers.

### Eggs in shell

The figures show the consumption of imported and commercially produced eggs plus an estimate of the number of eggs obtained by domestic poultry keepers.

### Table

#### Potatoes

Total disposals exclude seed and chat potatoes, stock-feed outside Ministry schemes and waste on farms. Disposals for food in the United Kingdom further exclude stock-feed under Ministry schemes and exports, and relate to the distribution of potatoes intended for human consumption. No allowance is made for waste in distribution or for feed to domestic animals.

#### Barley

The figures for brewing and food show the quantity used by brewers, maltsters, flakers, roasters, distillers and pot barley manufacturers.

#### Maize

Total disposals relate to the quantity used by manufacturers for production of edible starch, glucose and cereal breakfast foods, maize issued for pigeons and maize and maize meal used as feed.

#### Oilcake and meal

The series covers sales of high, medium, and low protein oilcake by oilseed crushers to dealers together with the quantity processed by provender millers and compounders. Low protein oilcake, such as coconut cake and palm kernel cake, was issued as part of the "cereal" feeding-stuffs ration.

### Milling offals

The figures relate to sales by flour millers to dealers, together with the quantity processed by provender millers and compounders.

### Conversion factors for items in the food tables

### Flou

Changes in the rate of extraction of flour from wheat:—

Per cent.

			P	er cent
At 3rd September 1939				70

Sunflower seed			 	26
Castor seed			 	44

### 71 Arrival of lend-lease foodstuffs

The figures given in this table cover arrivals of lendlease food supplies originating in the United States of America only. Arrivals from other countries are shown in the small table at the foot of page 72.

### V. FUEL AND POWER

Table

73

to

75

COAL

Production, consumption and stocks

The series showing weekly averages for individual months are based on weekly or monthly returns. The weekly averages for each year are based on returns for the calendar year where available.

#### Saleable mined coal

Production figures show the tonnage of coal raised and weighed at the pithead at coal mines in Great Britain, after deducting the weight lost in the elimination of stones and dirt by screening and washing. Miners' free and concessionary coal and all coal (of whatever quality) used for colliery purposes is included.

Opencast coal

Coal obtained by opencast working of deposits near the surface.

### 74 Inland consumption

Public utility undertakings

Gasworks include both statutory and non-statutory undertakings as well as gasworks of railway and transport undertakings.

Electricity undertakings comprise public supply and transport power stations.

Consumption of coal by railways is the amount used by the main line railways and the London Passenger Transport Board for locomotives, in workshops and stations, and for marine purposes. It should be noted that coal consumed by the railways for the generation of electricity is included under "Electricity" and that for the production of gas under "Gasworks."

### Coke ovens

The series relates to coal carbonised by coke oven plants.

### Industrial consumers

The figures include only coal consumption of undertakings with an annual consumption of 100 tons or more of coal and coke.

### Miners' coal

Coal supplied by the collieries free of charge or at specially reduced prices to miners and their dependents, officials, clerks, etc., employed at the mines, miners' welfare bodies and other authorised persons and institutions.

Merchants' disposals

The figures relate to the distribution of house coal, anthracite and boiler fuel by merchants to premises not separately programmed for their supplies and to other merchants for resale. In addition to private residences these premises include shops, offices, hotels, cinemas, institutions and the like and the smaller industrial consumers of solid fuel. House coal sold landsale by colliery undertakings acting as merchants is included.

### Collieries

The amount of coal, irrespective of quality, consumed at collieries for all purposes, including engine fuel.

Table

#### Miscellaneous

Water works, Service departments, shipments to Northern Ireland, industrial undertakings with an annual consumption of less than 100 tons, coastwise bunkers and non-industrial undertakings (that is, hospitals, schools, hotels, offices, shops, local authorities, Government buildings, etc., whose supplies are programmed and are not included in "merchants' disposals").

### 75 Distributed stocks

Distributed stocks relate to the amount of coal held by industrial consumers with an annual consumption of more than 100 tons of coal and coke, public utilities, railways, coke ovens, Government dumps (that is, coal held in Government stocking sites) and miscellaneous consumers and by merchants for domestic consumption. Stocks held in Northern Ireland are excluded.

### 76 Mined coal: Productivity

The figures before 1943 for the average number of shifts worked and possible and for the absenteeism percentage are based on returns collected by the Joint Accountants to the industry, in which the number of wage-earners differed from those obtained from the Ministry's own returns shown in the first column of the table. Average output per manshift before 1943 has not been calculated from these figures but from the annual statutory returns of the Ministry.

### Wage-earners on colliery books

This series includes all wage-earners, male and female, engaged in raising or handling coal or other minerals obtained with coal. Clerical and administrative staff are excluded.

### Shifts worked

The average number of shifts worked per wageearner per week is the total number of manshifts worked in the period divided by the number of wageearners on colliery books at the end of each week in the period.

### Shifts possible

Shifts possible are the sum of shifts worked and shifts lost through absenteeism of the workers. Shifts lost owing to recognised holidays, disputes, accidents, repairs, breakdown of machinery, etc., at the mines are not included.

### Absenteeism percentage

The absenteeism percentage is the total number of shifts lost through absenteeism multiplied by 100 and divided by the total number of shifts possible.

### Output per manshift

The average output in tons per manshift worked is the output of saleable coal divided by the total number of manshifts worked, at the coal face and overall.

### COKE

77

Coke produced at coke ovens consists of furnace coke and foundry coke. Production at gasworks includes coke used at these undertakings in the manufacture of water gas, in some cases that used for heating retorts and all other purposes.

Total inland consumption includes coke consumed at gasworks, blast furnaces and other industrial undertakings, by railways, non-industrial establishments and Service departments, disposals by merchants to domestic premises and shipments to Northern Ireland.

Total stocks relate to the amount held at producers' works, blast furnaces and other industrial undertakings, by railways, non-industrial establishments and Service departments and at merchants' yards. Stocks held in Northern Ireland are excluded.

### GAS AND ELECTRICITY

### 79 Gas

Total gas available is the sum of gas produced at all authorised and non-statutory gas undertakings in Great Britain (excluding from the year 1943 that produced at works of railway and transport authorities) together with the amount bought from coke oven plants by gasworks for resale. Gas produced by coke ovens for the iron and steel industry and sold direct to other industries for consumption for other purposes is not included.

### 81 Electricity

The figures relate to authorised undertakings and railway and transport power stations only. Electricity generated by industrial establishments for their own use is not included.

### PETROLEUM

The annual totals given in this series of tables and the weekly averages derived from them include certain revisions which have not been made to the monthly figures. The monthly figures in Tables 83 to 86 are for four or five week periods; in Tables 87 to 89 they are for calendar months.

The figures given for deliveries into consumption represent deliveries by the bulk petroleum distributors and not actual consumption.

### Petroleum products

### Motor spirit

83

to

Motor spirit includes distillation benzines used for industrial processes.

### Lubricating oils

Lubricating oils include medicinal paraffin and mineral jelly.

### Bitumen

Bitumen refers only to asphaltic bitumen refined by the distillation of asphaltic base crudes.

### Process oils

Products intended for use as raw materials in refineries.

#### Table

#### Approximate conversion factors

		- 4	erial galle	
Aviation spirit			310	
Motor spirit			300

Crude and process oils			250	

# 83 Arrivals of tanker-borne petroleum products and crude and process oils

The term "arrivals of tanker-borne petroleum products" covers liquid petroleum products carried in bulk in tankers; surplus bunkers removed from vessels of all descriptions; packed lubricants, whether carried as deck cargo or forehold cargo in tankers or in other vessels. It excludes paraffin wax, grease and natural bitumen. The figures for "refined petroleum products" refer to the quantities loaded at the port of shipment and are subject to a deduction of one-half per cent. for ocean leakage. Owing to differences in definition these figures which were provided by the Petroleum Board may differ, particularly in short-term periods, from the figures given in the Accounts relating to the Trade and Navigation of the United Kingdom.

### 85 Production from indigenous materials of petroleum products and substitutes

Indigenous production covers products obtained from refining shale oil and indigenous crude petroleum. It includes receipts by the bulk petroleum distributors from hydrogenation, low temperature carbonisation, tar distillation and benzole recovery plants. The figures under bitumen refer to the quantity of creosote used as a fluxing agent. The series quoted refer only to the output distributed by the Petroleum Board.

The figures for aviation and motor spirit include production of white spirit and kerosine.

Home production of fuel oil comprises mainly tar

### 87 Deliveries into civilian consumption of motor spirit

This analysis of deliveries into consumption is based on coupon issues and does not take into account the use of coupons for purposes for which they were not intended. Consumption includes quantities delivered against coupons exchanged for Service department requisitions (private cars) and indents (public service and goods vehicles). Consumption by the armed Forces is excluded.

### Private cars and motor cycles

Deliveries for cars taxed on horse-power and for motor cycles, including private hire cars and invalid carriages, but excluding cars and cycles operated by Government departments, local authorities and the police services.

#### RAW MATERIALS

Table

#### Commercial vehicles

This heading includes deliveries for consumption by goods vehicles, buses, coaches, taxis, Government departments, local authorities, the police services, vehicles distributing petroleum products, etc.

#### Industrial uses

Deliveries for unlicensed vehicles, ambulances (other than those owned by local authorities), vehicles operating on trade plates, plant, machinery and watercraft used for industrial purposes, lighting plants and motor spirit used for industrial processes.

### Agricultural uses

Deliveries for farmers' vans, lorries and tractors not operating under carriers' licences or permits, agricultural engines (5s. class) and agricultural stationary engines.

# 88 Deliveries into consumption of fuel for diesel-engined road vehicles

This table is based on the total deliveries into consumption of gas oil on which duty is paid for use in Table

diesel-engined road vehicles and on figures of coupon issues to consumer groups. The figures include quantities delivered against coupons exchanged for Service department indents.

## 89 Deliveries into consumption of gas, diesel and fuel oil

Including deliveries to certain coastal vessels which are linked with concerns operating ocean-going vessels.

#### Burning

Deliveries of oil for central-heating, steam raising and industrial furnaces.

#### Power

Deliveries of oil for stationary and mobile engines and for bunkers for fishing and coastal vessels excluding those linked with concerns operating oceangoing vessels.

#### Manufacture

Deliveries mainly for gas works and grease blending plants.

### VI. RAW MATERIALS

### 90 Iron ore and manganese ore

#### Iron ore

The ferrous content of home iron ore is about 30 per cent., compared with 55-60 per cent. for imported iron ore.

Production figures for 1940-45 include small quantities of manganese ore.

Consumption figures relate to the consumption of raw and calcined ore as charged, except in the case of the figures for home iron ore in 1937 and 1938 which relate to raw ore and the raw equivalent of calcined ore. The 1937 and 1938 consumption figures for both home and imported ore include manganese ore, but exclude consumption in steel works. Consumption of imported ore in blast furnaces includes consumption in sinter plant.

Stocks of imported iron ore include ore in ships discharging and in transit to works.

### Manganese ore

Stocks are the quantities held at works and in transit in the United Kingdom.

### 91 Pig iron

This comprises hematite, basic, foundry and forge pig iron, direct iron castings and blast furnace ferro-alloys.

Consumption includes refined and cylinder pig iron consumed in refined iron works.

Total stocks include stocks at wrought iron and refined iron works and in Ministry of Supply stock-yards.

Where cumulative adjustments have had to be made to annual figures for production and consumption, these may not correspond exactly with the monthly figures.

# 92 Iron and steel scrap and steel ingots and castings Iron and steel scrap

Consumption figures relate to the quantity of steel and cast iron scrap (including scrap arising in own works) consumed in the production of steel ingots and castings, excluding the scrap consumed in blast furnaces.

Stocks are the quantities held at steel works and steel foundries.

Receipts of "bought" scrap are receipts of scrap bought in the home market. Figures before 1940 are estimated.

### Steel ingots and castings

From July 1943 alloy steel figures relate to steel, other than high speed steel, containing a minimum of 0.4 per cent. of chrome or nickel, 0.1 per cent. of molybdenum, tungsten or vanadium, or 10.0 per cent. of manganese. Before July 1943 the minimum proportions of these elements in alloy steel were 0.5 per cent., 0.25 per cent. or 12.0 per cent. respectively.

Where cumulative adjustments have had to be made to annual figures for production and consumption, these may not correspond exactly with the monthly figures.

### 93 Semi-finished and finished iron and steel

### Billets, blooms and slabs

Figures relate only to material for the production of heavy and light rolled products. From 1941 alloy steel is excluded.

### Heavy rails and sleepers

Rails over 36 lb. per yard (perfects and defectives) and sleepers, fishplates and soleplates for use with them.

Heavy and medium plates

Boiler plate  $\frac{3}{16}$  inch thick and over; other plates  $\frac{3}{16}$  inch thick and over; medium plates and sheets under  $\frac{3}{16}$  inch thick, down to and including 3 mm. thick.

Other heavy steel products

Angles, tees and sections over 4 united inches; channels over 3-inch web; girders, joists and beams 3-inch web and over; rounds, squares and hexagons 3-inch and over, and flats over 5-inch wide; shell steel (ingots, billets and bars for shells, shot and bombs).

Light rolled products

Rails under 36 lb. per yard, and accessories; steel arches and accessories; angles, tees and sections 4 united inches and under; channels 3-inch web and under; joists and "H" bars under 3-inch web; wire rods; ferro-concrete bars and other bars, rounds, squares, hexagons, etc., under 3-inch and flats 5-inch wide and under; hot rolled hoop and strip.

Cold rolled strip

Under 18-inch wide.

Sheets

Under 3 mm. thick, coated and uncoated, but excluding tin, terne and blackplate.

Tin, terne and blackplate

Includes tinned sheets and uncoated tinplate base.

Steel castings

Net weight of fettled castings produced, machined as necessary to ensure soundness.

Steel forgings

Net forged weight of drop forgings and other type forgings.

Tyres, wheels and axles

Tyres, rolled rings, straight axles, solid wheels, disc wheel centres and assembled wheels and axles.

Stocks of steel

Ingots, semi-finished and finished steel held at producers' works, in British Iron and Steel Corporation stockyards and in transit in the United Kingdom. Consumers' stocks are excluded.

### 94 Chrome ore and ferro-alloys

Chrome ore

Stocks are the quantities held by consumers, importers and the Ministry of Supply. Stocks in transit are excluded except in 1940.

Tungsten, molybdenum and vanadium

Production and consumption figures relate to the non-ferrous metal content of ferro-alloy and other finished products. Stock figures relate to the non-ferrous metal content of stocks of the ferro-alloys and of the ore (allowing for losses in refining) held by producers, consumers, merchants and the Ministry of Supply.

Ferro-chrome, silico-manganese, ferro-manganese, ferro-silicon, calcium silicide

Stocks are the quantities held at consumers' works, in British Iron and Steel Corporation stockyards

Table

and in transit in the United Kingdom. Figures for stocks and consumption of ferro-silicon exclude special grade used for aeronautical purposes.

### 95 Non-ferrous metals

Stocks

Except where otherwise stated, figures for stocks of copper, zinc, lead, nickel, tin, bauxite, cryolite, alumina and magnesite relate to quantities held by the Government and by consumers and include stocks in transit in the United Kingdom. Stocks of magnesium and magnesium alloys are Government stocks only and include stocks not taken on charge.

Refined copper

Production figures relate to production on toll contracts from imported blister, including scrap refined on private account from 1943.

Virgin copper

Unwrought copper (electrolytic, fire refined and blister).

Zinc concentrates

Consumption figures from 1942 include consumption other than for zinc production.

Virgin zinc

Unwrought zinc, excluding re-melted zinc. Some secondary material is included in the production figures for the years 1935 to 1939.

Refined nickel

Includes ferro-nickel.

Refined lead

English refined lead is included from 1942. Reexports on toll transactions are included in total disposals and also in home consumption where fabrication had taken place before re-export.

Production figures for 1935 to 1942 relate to production from imported and domestic ores and concentrates; for 1943 to 1945 they relate to lead reclaimed from secondary and scrap material, and lead refined from domestic ores.

Virgin tin

Figures for production from 1942, and for total disposals throughout, include residues refined on toll and re-exported.

Bauxite

Expressed in terms of high grade bauxite.

Magnesium and magnesium alloys

Production includes scrap recovery. Consumption figures relate to despatches to consumers.

Magnesite (calcined and dead burnt)

Production figures refer to metal extracted from sea water.

### 96 Aluminium

Virgin aluminium

Consumption figures include the aluminium content of virgin alloys. Stocks are total stocks, including consumers' stocks and stocks in transit, and they include the virgin aluminium content of all alloys.

Secondary aluminium

Production includes production from crashed aircraft. Consumption figures relate to releases by the Light Metals Control. Stocks are total stocks, including consumers' stocks and stocks in transit.

### 97 Softwood and hardwood

Sleepers and crossings of all kinds are excluded, except in figures for production before 1942. Softwood excludes pitwood, boxboards, pulpwood and poles. Hardwood excludes pitwood, logs for veneer production and staves.

Production of softwood and hardwood is the estimated output, based on deliveries from sawmills, of timber sawn from home-grown logs. In the figures for production after 1941 and in all figures for consumption of home-grown timber an allowance of 10 per cent. (softwood) and 5 per cent. (hardwood) has been made for conversion to square-edged material.

Consumption of home-grown softwood and hardwood is calculated from production and changes in stocks; that of imported from the Timber Control's records of arrivals at ports to their account and changes in stocks.

Stocks of home-grown softwood and hardwood are the quantities held by the Home Timber Production Department, by merchants, by consumers (including railways) and in National stock. Ineffective stocks, estimated from July 1941 at 12,000 standards (softwood) and 1.25 million cubic feet (hardwood), are excluded.

Stocks of imported softwood and hardwood are National stocks (including stocks awaiting discharge), importers', merchants' and consumers' (including railways') stocks and stocks of recovered timber. Imported hardwood stocks exclude ineffective stocks of hardwood, which until August 1941 amounted to 4 million cubic feet and from September 1941 to 2 million cubic feet.

Stocks in the hands of firms whose normal stocks are less than 20 standards (softwood) or 1,000 cubic feet (hardwood) are excluded.

### 98 Pitwood and plywood

### Pitwood

All mining timber specially prepared for use underground in mines for propping or shoring or as pit sleepers. It is shown in Gothenburg standards (equivalent to 180 piled cubic feet) calculated in the case of round pitwood in accordance with the Gothenburg scale, and in the case of other mining timber on an equivalent basis.

Round pitwood comprises pitprops, including sawn and quartered props, round bars and long pitwood. Sawn pitwood comprises other sawn mining timber.

The figures for production show the quantities despatched by the trade and by the Home Timber Production Department.

Table

Consumption is calculated from deliveries to mines adjusted for changes in stocks at mines.

Stocks are National stocks (including stocks in transit and piling) and colliery stocks (including, from 1943, stocks held underground).

#### Constructional plywood

All rectangular boards, including block board, etc., of standard construction, excluding plywood of special shape or construction or of technical specification.

Production figures show the quantity of homeproduced plywood taken into National stock.

Consumption is calculated from deliveries from National stock adjusted by changes in private stocks.

Stocks are National stocks, including stocks awaiting discharge. Merchants' and certain consumers' stocks are included up to June 1943.

#### Technical plywood

Plywood produced for special requirements of the Service departments.

### 99 Hides, skins and finished leather

### Cattle hides

Production figures show deliveries to tanners of native raw hides. Stocks consist of native hides and imported wet, wet salted, dry and dry salted cattle and buffalo hides held by tanners and dressers. Stocks in transit in the United Kingdom are included.

### Kips and calfskins

Production figures show deliveries to tanners of native raw kips and calf skins.

Stocks consist of native and imported kips and calfskins held by tanners and dressers.

### Goatskins

Stock figures relate to imported goatskins held by tanners and dressers.

### Sheepskins

Production figures show the quantity of native sheep and lamb pelts fellmongered, including deliveries of woolled skins to dressers for dressing with the wool on.

Stocks consist of native and imported sheep and lamb pelts and woolled skins for dressing with the wool on, held by tanners and dressers and in Government reserve.

### Rough tanned hides and kips

East Indian kips, calfskins and buffalo hides, including quantities in transit in the United Kingdom, held by tanners and dressers, factors and merchants.

### Rough tanned goat and sheepskins

Imported rough tanned goat and sheepskins, including quantities in transit in the United Kingdom, held by tanners and dressers, factors and merchants.

### Heavy leathers (leathers sold by weight)

Sole leather bends and offal, hide mechanical and textile leathers.

Consumption figures for heavy leathers represent deliveries by producers; for sole leather they also

include imports and are adjusted for changes in certain stocks.

Stocks of heavy leathers comprise sole leather bends, offal and cut stock held by tanners, boot manufacturers, factors, merchants, sole cutters and heel builders and hide mechanical and textile leathers held by tanners, factors and merchants. Stocks in transit in the United Kingdom and any stocks in Government reserve are included.

Light leathers (leathers sold by area)

Upper and lining leather, gloving leather, chamois, upholstery, case, clothing, hat, bookbinding and other light leathers.

The consumption figures represent deliveries by producers; for upper and lining leather they also include imports and are adjusted for changes in certain stocks.

Stocks are the quantities held by producers, boot manufacturers, factors and merchants. Stocks in transit in the United Kingdom are included.

#### 100 Rubber

Waste rubber

Crumb rubber is included in 1942.

Production is the collection of waste rubber from all sources including manufacturing scrap and domestic collections and the arrival of battlefield scrap at authorized dumps in the United Kingdom. From July 1944 the figures relate to collections at Ministry of Supply dumps only.

Consumption is the processing of waste into reclaimed rubber. From July 1944 the figures relate to issues from Ministry of Supply dumps only.

Stocks are the quantities held at Ministry of Supply dumps and, before July 1944, by cable strippers, licensed merchants, reclaimers, rubber manufacturers, and at Service dumps.

Reclaimed rubber

Natural, synthetic and, in the monthly figures for 1943, crumb rubber.

Production figures give production by reclaimers and, up to July 1944, by rubber manufacturers.

Consumption includes direct usage of waste rubber until July 1944. From that date figures are estimated and cover reclaimed rubber only.

Stocks are the quantities held by reclaimers, rubber manufacturers and the Ministry of Supply. Government lend-lease stocks are excluded in the figure for the end of 1941.

Natural rubber

Includes latex (except in the monthly figures for 1942) but excludes balata and gutta percha.

Consumption includes exports except in the monthly figures for 1942.

Stocks are the quantities held by H.M. Government, by manufacturers and, before January 1942, by importers and dealers in London and Liverpool. Stocks in transit are included from January 1942.

Table

Synthetic rubber

G-R-S type, neoprene, butyl, N-type, and miscellaneous synthetic rubbers. "Thiokol" and "Novoplas" are excluded from July 1944.

Consumption figures include exports.

Stocks are the quantities held by H.M. Government and by rubber manufacturers.

#### 101 Chemicals

Industrial alcohol

Ethyl alcohol expressed as 68 O.P. spirit.

Consumption shows deliveries to consumers including methylators.

Stocks are quantities held on behalf of the Government and by producers.

Industrial methylated spirit

Consumption shows deliveries to consumers.

Methanol

Consumption shows deliveries to consumers.

Stocks are quantities held on behalf of the Government and by producers and consumers.

Urea

Consumption shows deliveries to consumers.

Nitric acid

Production in acid works, including Government acid plants.

Stocks are the quantities at acid works and Government plants.

Pyrites

Imported and home-produced pyrites for the manufacture of sulphuric acid.

Production figures relate to arrivals of homeproduced material at acid works.

Stocks comprise the Government reserve and material at acid works, including Government acid plants. Stocks in transit in the United Kingdom are included from June 1943.

Sulphur (for acid)

Production figures relate to arrivals of home-produced material at acid works.

Stocks comprise the Government reserve and material at acid works, including Government acid plants. Stocks in transit in the United Kingdom are included from June 1943.

Sulphur (regular)

Production figures relate to recovered sulphur.

Stocks comprise the Government reserve and material at consumers' works and include manufactured forms. Stocks in transit in the United Kingdom are excluded.

Spent oxide and anhydrite

The figures relate only to material for use and consumed in the manufacture of sulphuric acid.

Production figures show arrivals of home-produced material at acid works.

Stocks are the quantities at acid works.

Sulphuric acid

As 100 per cent. acid. From 1941 acid made at Government factories is included.

Stocks are the quantities at acid works and Government plants.

### Calcium carbide

Consumption figures relate to despatches from works.

#### 102 Fertilizers, ammonia and molasses

Nitrogenous fertilizers (nitrogen content)

Production figures relate to ammonium sulphate, "Nitro-chalk" and concentrated compound fertilizers.

Consumption and stock figures relate to ammonium alphate, "Nitro-chalk," concentrated compound fertilizers, Chile nitrates of soda and potash, Trail ammonium phosphate, ammonium nitrate, nitrate of lime and cyanamide.

Non-agricultural uses are excluded except in the series for total disposals which includes exports of ammonium sulphate for all purposes.

Superphosphate (P2O5 content)

Consumption figures relate to deliveries by manufacturers and from Government stores to merchants and farmers for direct application, and quantities used in ordinary compound fertilizers.

Stocks are the quantities held by manufacturers and by dry mixers. From February 1945 imported material is included.

Ground basic slag (P2O5 content)

Production figures relate to slag ground in the United Kingdom from home-produced raw slag.

Consumption relates to deliveries of home ground material to merchants and farmers for direct application.

Stocks are the quantities held by manufacturers.

Ground phosphate (P,O, content)

Production relates to phosphate ground in the United Kingdom from imported phosphate rock.

Consumption relates to phosphate ground in the United Kingdom delivered by grinders for direct application or for mixing in compound fertilizers.

Stocks are home-produced material held by manufacturers and compounders.

All other phosphatic fertilizers (P2O5 content)

Production figures relate to organic fertilizers, treated phosphate rock and concentrated compound fertilizers.

Consumption figures include in addition ammonium phosphate, triple superphosphate and, in 1943 and 1944 only, calcium metaphos. They relate to quantities delivered to merchants and farmers for direct application or used by compounders.

Stocks comprise treated phosphate rock, concentrated compound fertilizers and, in the figures for 1942 to 1945, triple superphosphate. The figures relate to home-produced and imported material held by superphosphate manufacturers and dry mixers.

Table

Potash (K<sub>2</sub>O content)

Agricultural potash only.

Consumption figures relate to quantities delivered in ordinary or concentrated compound fertilizers or for direct application.

Stocks are the quantities held by merchants and compounders.

Compound fertilizers (excluding concentrated compound fertilizers)

Total weight of product.

Consumption relates to deliveries by all compounders to merchants and farmers.

Stocks are the quantities held by compounders.

Phosphate rock

Consumption figures show the quantity used in the manufacture of fertilizers or for other industrial purposes.

Stocks are the quantities held for use in fertilizers by the Government, superphosphate makers and grinders, and quantities held by manufacturers for other industrial purposes.

The figures exclude ammonia produced in by-product factories and converted directly into sulphate of ammonia.

Consumption figures show deliveries by producers to consumers and for export.

Stocks are the producers' stocks at works, including stocks in Government factories. Consumers' stocks are included in the figure for 1942.

Molasses

The figures are expressed in terms of blackstrap containing 52 per cent. sugars.

Production is the production from sugar cane and sugar beet of molasses handled by the Government.

Consumption figures give deliveries for distilling; for cattle feed including silage, sweetened pulp and straw ration; and for tanning, solvents, yeast, coremaking, citric and lactic acid, and Ministry of Food requirements.

Stocks are those held in depots and refineries and by consumers. The figure for 1945 includes the molasses equivalent of sugar awaiting conversion to high test molasses.

103 Plastics and materials for plastics

Home consumption covers consumption in producers' own factories and deliveries to consumers (including Government consumers).

104

Paper and papermaking materials
"Paper" means paper or board; "mills" means paper mills or board mills.

Papermaking materials other than woodpulp

Consumption figures relate to consumption by mills. Stock figures of pulpwood, straw for papermaking, and esparto show the quantities held at mills. The stock figures for rags, waste ropes, etc., and waste paper are prepared from returns made by mills and merchants; they cover all mills and the principal merchants.

Paper equivalent

The paper equivalent figures show the approximate amount of paper which it is estimated can be produced from the papermaking materials other than woodpulp shown as consumed or in stock. The approximate paper equivalents are: pulpwood  $37\frac{1}{2}$  per cent., straw 43 per cent., rags, etc.,  $66\frac{2}{3}$  per cent., waste paper 80 per cent., esparto 42 per cent.

Pulpwood

Imported pulpwood and home-grown timber, including wood waste and chippings.

Woodpulp for papermaking

This comprises chemical sulphite pulp (bleached, partly bleached, bleachable, easy bleaching, strong and bamboo); chemical sulphate pulp (bleached, partly bleached, bleachable, easy bleaching, knotter and screenings, and kraft); and mechanical pulp (wet and dry mechanical pulp) in terms of air dry weight used or held by papermakers and manufacturers of cellulose wadding.

Industrial woodpulp

The woodpulp held or used by manufacturers of rayon and transparent cellulose film.

Newsprint

Consumption figures for 1939 give the quantities of newsprint used by publishers of newspapers and periodicals; subsequent figures also include quantities licensed for other purposes, exports and re-exports.

Stock figures show the quantity of newsprint held at mills and by publishers of newspapers and periodicals.

Building boards and other paper and board

Building boards comprise insulation board, laminated wallboard and hardboard.

Consumption is derived by adding together the paper imported and the home-produced paper invoiced out by mills, and adjusting at the end of every four months for any reduction or increase in the stocks of paper held by manufacturers, merchants and large consumers.

Stocks are the quantities held by papermakers, paper merchants, bag makers, box makers, wallboard merchants, converters, manufacturing stationers and consumers. The returns made by bag makers, box makers, paper makers and wallboard merchants are believed to cover all engaged in the trade. The principal converters who are omitted are periodical publishers and printers, although certain printers are included in the other categories where, for example, they operate also as merchants. The returns obtained from manufacturing stationers cover all those who are likely to hold considerable stocks, but the returns obtained from consumers relate only to a miscellaneous selection of large firms. National stocks of building boards are included in the figures for 1945.

### Raw cotton, cotton waste and cotton linters

Raw cotton

105

The home consumption figures show the quantities used by (a) cotton spinning mills for cotton spinning,

Table

and (b) other consumers for spinning in mixture with cotton waste, wool, and asbestos and for the manufacture of surgical dressings, upholstery, rayon and, until March 1943, explosives.

Stocks are the quantities held by merchants until 1st April 1941 when such stocks were requisitioned by the Cotton Control. The estimated weight of raw cotton unloading at ports and in transit in the United Kingdom is included.

Cotton waste

Cleaning waste is included from January 1941.

Production figures relate to merchants' receipts of cotton waste from spinning, doubling, weaving and hosiery mills in the United Kingdom.

Home consumption figures show the amount of cotton waste used mainly in waste, woollen and cotton spinning and in the manufacture of surgical dressings, upholstery, cleaning waste and, until August 1943, explosives. Consumption in purification factories, for which the figures are Control deliveries to such factories up to the end of June 1941 and thereafter actual consumption, is included.

Stocks are the quantities held by the Cotton Control, merchants and commercial users (including stocks at purification factories.)

Cotton linters

Home consumption figures show the use of imported first and second cut linters, United Kingdom and salvage linters, mainly in the manufacture of rayon, plastics, paper, bedding, surgical dressings, insulation material and explosives.

Stocks are those held by the Cotton Control, merchants, oilcake manufacturers and consumers.

### 106 Cotton yarn

Cotton yarn

Production figures give the total conditioned weight of single cotton yarn, whether sold or used in single or doubled form. They include yarn spun for sale, yarn used for further manufacturing processes in the same firm, and yarn spun on commission. They exclude yarn spun from waste, and spun rayon and mixture yarns.

Deliveries are the total weight of yarn delivered by cotton spinners or used by them for further processing against orders approved by the Cotton Control under the Cotton Allocation Scheme. Cotton waste yarn and cotton and spun rayon mixture yarn are included. Yarn for industrial uses is that used in certain manufactures (for example surgical dressings, hosiery, tyres and narrow fabrics), whether for home consumption or export, and for certain essential home services. Yarn for the export trade is yarn exported as yarn, thread, piece goods or made-up goods.

Consumption by weavers of cotton yarn is the amount of cotton and cotton waste yarns used in the manufacture of cotton fabrics and cotton and rayon mixture fabrics.

### RAW MATERIALS

Table

Cotton waste yarns

Production figures relate to yarns wholly of cotton waste.

Spindles running

Average of the number of single yarn spindles running during each week of the period on cotton only up to October 1941, and thereafter on cotton, spun rayon and mixture yarns. Figures are given as mule equivalents. Spindles running on waste yarns are excluded.

### 107 Rayon, rayon yarn and woven fabrics

Rayon

Production figures from 1941 give the quantity of rayon and other synthetic fibres produced in the United Kingdom on a delivered weight basis. Before 1941 the figures are excise figures less an estimated allowance for waste.

Spun rayon and mixture yarns

Production figures cover yarns of spun rayon, cotton and rayon mixtures, cotton and wool mixtures, and waste yarns other than those of cotton waste and raw cotton.

Woven cotton fabrics

Production is the output of grey and coloured-woven cotton cloth made for sale or on commission on looms of not less than 23-inch reed space. The figures cover jacquard cloths and cloth for made-up cotton goods, including towels, quilts, bed-coverings, surgical bandages and dressings and tyre cord and fabric. They exclude hosiery, lace net and machinery belting and other cotton smallwares. The figures represent the linear yardage of cloth in the grey state before undergoing finishing processes.

Woven rayon and mixture fabrics

Production is the output of fabrics made wholly from continuous filament or spun rayon, from nylon (after August 1944) and from mixtures of rayon, nylon and cotton yarn. Weaving is on looms of not less than 23-inch reed space. The fabrics included are those containing not less than 85 per cent. by weight of cotton, rayon or nylon yarn. The figures represent the linear yardage of cloth in the grey state before undergoing finishing processes.

Rayon yarn

Consumption figures give the consumption by weavers of yarn made of continuous filament, spun rayon (long or short staple) and other synthetic fibres (such as nylon) in the manufacture of rayon and mixture fabrics.

Looms running

Until December 1943 the average of the number of looms (of not less than 23-inch reed space) running on cotton, rayon, nylon and mixture fabrics during each week of the period. From January 1944 the figure given is the number of looms running on the last full working day of the month. The annual figures for 1944 and 1945 are monthly averages.

Table

108 Wool and silk

Raw wool

Production figures show the intake of United Kingdom fleece and skin wool. From 1937 to 1940 the figures are estimated. From 1941 they give the actual weight of wool taken up by the Ministry of Supply, the Board of Trade or the Ministry of Agriculture and Fisheries.

Home consumption is the estimated clean weight consumed in combing, woollen spinning and felt

Stock figures show the estimated clean weight of raw wool in Government ownership or held by the U.K./Dominion Wool Disposals, Ltd. (Joint Organisation), merchants, top-makers, spinners and manufacturers. Stocks held by farmers are excluded.

Worsted yarn

From 1942 the figures show the wool content of manufacturers' deliveries. The figure for 1937 relates to the production (total weight) of yarn wholly or mainly of wool, including admixtures amounting to about 5 per cent.

Woven wool fabrics (excluding blankets)

Production figures relate to deliveries except in 1937. All lengths are expressed as the equivalent length of cloth 54 inches wide.

Blankets

Production figures relate to deliveries computed on the basis of 1 blanket  $=2\frac{1}{2}$  linear yards and 4 cot blankets = 1 full size blanket.

Raw silk

Consumption figures from 1941 give the total amount of raw silk, undischarged weight, put into process. Figures for 1937 and 1938 show deliveries to mills.

Stocks are those held in the United Kingdom by consumers and by the Control, including stocks in transit but excluding material in process.

Silk noils

Production is by waste silk spinners. From March 1942 production from cartridge bag cuttings is also included.

Consumption shows quantity put into process.

Stocks are held by waste silk spinners, by noil spinners, and by the Government. From February 1942 garnetted material is included in Government stocks.

### 109 Jute, flax and hemps

Raw jute

The home consumption figures show the quantity of raw jute used in jute yarn spinning.

Stocks are those held by the Control, spinners and

Imported jute goods

The home consumption figures relate to deliveries by merchants against disposal licences issued by the Control; consumption by large consumers who buy direct from the Control; quantities sold by the Control to departments; and imported rove and other

yarn sold by the Control to weavers, carpet manufacturers and other users. Home-produced goods from Control stocks are included from March 1942 to March 1945.

Stocks cover imported jute goods held by the Control, merchant distributors and consumers purchasing direct from the Control, and, from March 1942 to March 1945, home-produced goods taken into Control stock.

#### Flax

From April 1944, production includes imports from Eire.

Home consumption figures show the amount of flax spread for spinning by flax spinners and sales to the paper and other trades. Hemp and hemp tow used by flax spinners are included in the figures for 1940 and 1941.

Stocks are the quantities held by the Flax Control and by spinners. Hemp and hemp tow used by

Table

flax spinners are included in the figures for 1940 and 1941.

#### Soft hemps

True hemp comprises Italian, Central European (including Turkish) and Chilean hemp. The figures for consumption and stocks in 1940 and 1941 exclude some portion of true hemp taken over by the Flax Control and used by flax spinners.

Stocks of soft hemps are the quantities held by the Control and by spinners and papermakers, excluding stocks in transit in the United Kingdom.

#### Hard hemps

Sisal, manila, phormium tenax and other varieties.

Home consumption is the amount of hemp used by spinners, papermakers and bedding manufacturers.

Stocks are the quantities held by the Control and by spinners, papermakers and bedding manufacturers, excluding stocks in transit in the United Kingdom.

### VII. PRODUCTION

### SHIPBUILDING

111 to 116 Figures of completions refer to vessels which have completed their trials and been handed over to their owners.

### Standard displacement

The standard displacement of a *surface* vessel is the displacement of the vessel complete, fully manned, engined and equipped ready for sea, including all armament and ammunition, equipment, outfit, provisions and fresh water for crew, miscellaneous stores and implements of every description that are intended to be carried in war, but without fuel or reserve feed water on board.

The standard displacement of a *submarine* is the surface displacement of the vessel complete (exclusive of the water in non-watertight structure) fully manned, engined and equipped ready for sea, including all armament and ammunition, equipment, outfit, provisions for crew, miscellaneous stores and implements of every description that are intended to be carried in war, but without fuel, lubricating oil, fresh water or ballast water of any kind on board.

### Deep displacement

Deep displacement of surface vessels is the same as standard displacement except that it includes fuel and reserve feed water.

### Light displacement

Light displacement is the displacement of the ship complete with ammunition, but excluding oil, water,

petrol, provisions, canteen stores, naval stores, officers' slops, navigation stores and paymasters' slops.

### War load displacement

For landing craft, war load is the light displacement plus the full weight of armoured fighting vehicles, mechanical transport, troops, permissible ammunition, stores, fuel and crew.

### Gross tonnage

Gross tonnage is the total volume of all the enclosed spaces of a vessel above the inner bottom. The unit of measurement is a ton of 100 cubic feet.

### 112 Naval vessels: Ocean and coastal convoy etc.

### Minelayers

This series comprises fast minelayers, controlled minelayers, minelaying lighters and coastal minelayers.

Minesweepers, trawlers and boom defence vessels

These include fleet minesweepers; minesweeping, anti-submarine, and minesweeping anti-submarine trawlers; boom, gate and net vessels.

### Mosquito craft

This series comprises steam gun boats, motor torpedo boats, motor anti-submarine boats, motor launches and motor minesweepers.

### Landing craft

Types included are tank, flak, gun, mechanized, assault, support, personnel and infantry landing craft.

### MUNITIONS

117 to 129

This section gives a summary of United Kingdom production of the more important munitions and warlike stores during the rearmament period immediately preceding the outbreak of war and during the war itself. The munitions section and the separate sections giving the production of military aircraft and naval vessels taken together cover the major groups of war production for the armed forces. There are important connections between this and the other two sections, for example, this section includes the production of guns for aircraft and naval vessels. A large part of the munitions tables relate to production administered by the Ministry of Supply, which was responsible not only for Army requirements but also for some production for the requirements of the Royal Navy and the Royal Air Force. The most important items of production of this type included in these tables are small arms ammunition, explosives and the filling of shells and bombs. Except for this production the other two Supply departments remained responsible for their major munitions requirements. Of the production shown in the munitions tables, the Admiralty was responsible for the production of all naval guns (Table 119), the Oerlikon gun (Table 120), naval propellant production (included in Table 125) and for most types of empty components for naval ammunition (Table 124); the Ministry of Aircraft Production was responsible for the production of aircraft guns including the Hispano-Suiza (Table 120) and to a varying extent for the supply of empty bomb components

The choice of items shown in the tables has necessarily been limited, although for certain groups the coverage of the figures is more complete than for others. For example, armoured fighting vehicles, artillery, light guns and small arms ammunition are comprehensively covered since these items lend themselves more readily to generic grouping than do certain others such as engineer stores, signal equipment and artillery instruments. The difficulty of dealing with groups of this latter type where only a limited selection of items has been included is overcome to some extent for Ministry of Supply production by prefacing the munitions tables with an index of munitions production (Table 117) from which the general trend of production in each main group can be readily seen. Some important groups are omitted entirely, both from these tables and from the index of productionfor example, medical stores, clothing and general equipment and stores.

The statistics given in these tables come from two main sources. Those covering the period of the war and a small number of pre-war figures are extracted from the departmental records of the Admiralty and the Ministry of Supply (including the records of aircraft munitions production now in the possession of the Ministry of Supply). Most of the pre-war figures on the other hand come from Deficiency

Table

Progress Reports submitted to the Committee on Imperial Defence by Service departments during the rearmament period.

With one exception the tables cover new production only in the United Kingdom. The figures therefore exclude repairs, reconditioning, conversions and supplies from overseas. An exception is made for armoured fighting vehicles; overseas supplies of these vehicles were of exceptional importance and such supplies are shown alongside United Kingdom production in Table 126. Production of spare parts is excluded from all the tables.

The basis of enumeration in these tables is generally "deliveries passed inspection" and, for naval guns after January 1942 "acceptances after proof". For the few items where the basis is "deliveries ex factory" this is shown in the footnotes to the tables. The production figures relate to periods of three months (not necessarily ending on the last day of a calendar quarter) or to periods of 13 weeks ending near the end of the calendar quarter. The effect of these small variations in the time series is slight.

A double line drawn horizontally across a column indicates that the production of the particular item of equipment ceased in the preceding quarter.

The various abbreviations used in the column headings are listed and explained at the beginning of the Digest.

### 117 Index of Ministry of Supply munitions production

The index relates to Ministry of Supply production, that is, predominantly but not entirely to Army equipment. The major items in each of the groups shown in this table were included but the coverage varied with the different groups of stores. Owing to the very large number of spares produced and the lack of information regarding them, it was not found possible to make any allowance for spares in the index. From various estimates which were made, however, it is evident that the omission of spares from the index brings it appreciably lower towards the end of the war than it would otherwise have been.

The basis of the weighting system employed was fixed value. This was first calculated with prices ruling at October 1939, but a revision was made in mid-1942 as price changes had by that time appreciably affected the weighting. The revision was carried back to March 1941, the index being adjusted to produce a smooth join with the earlier figures.

As the index is based on fixed prices it relates to changes in deliveries and not to changes in expenditure. Any distortion due to differences in time between payments and deliveries is thus excluded.

The index is not adjusted for holidays.

# 118 Artillery equipments, instruments and tank and anti-tank guns

Deliveries of experimental or pilot models are not in general included in the figures.

The figures for light anti-aircraft equipments relate to the 40 mm. Bofors only. Up to the outbreak of war all supplies of this equipment were imported.

Only new production is included in this table and the figures therefore exclude the extensive programme of conversion which was in force immediately preceding and during the early stages of the war. The scale of this programme can be seen from the following figures:—

Equipment	Nu	mber	Duration	
	Pre-war	War	of programme	
Field 18 pdr. to 25 pdr.	611	829	1937 to June 1941	
A.A. 3-in. 20 cwt, (guns only)	431	30	1937 to January 1940	
60 pdr. to 4.5-in.	1	64	1939 to December 1940	

### 119 Naval guns

The distinction between "short" and "long" range guns under anti-aircraft is broadly the same as that between "light" and "heavy" in Table 118. Short range guns comprise the 2 pdr. and 40 mm. Bofors. Long range covers all larger calibres.

### 126 Armoured fighting vehicles

This is the only table in the section to include supplies from sources other than the United Kingdom. The term "overseas" covers the United States of America, Canada, South Africa, Australia and New Zealand. Supplies of tanks were from the United States of America and Canada only. The term "supplies" includes deliveries not only to the United Kingdom, but also to United Kingdom, Dominion and Colonial forces in any theatre of war irrespective of whether the forces were under War Office control or not. The figures include 2,375 Canadian tanks retained in Canada and about 15,500 armoured carriers and cars retained in Canada and Australia for home defence.

The weight shown for tanks is the weight "in action", that is, including armament and allowance for ammunition, wireless and other equipment and crew.

### 127 Wheeled vehicles

The figures in this table cover production for the Service departments only. Total production of motor vehicles in the United Kingdom is given in Table 139.

The vehicles in this analysis, which are broadly designated as mechanical transport, include all mechanical wheeled vehicles except vehicles classified as fighting vehicles, that is, except armoured cars, scout cars and armoured command vehicles.

The classification used is based on broad general groupings. The various lorries and trucks are not all conventional load-carriers; a considerable number are vehicles with special bodies and fittings for special loads as well as for numerous technical purposes. It may, however, be useful to aggregate production in terms of load-carrying capacity and for this purpose heavy tractors should be regarded as equivalent to 6-ton lorries and light tractors and ambulances to 1-3-

Table

ton lorries; heavy cars are vehicles of 16 h.p. and upwards, while light cars and vans are below 16 h.p. It should be noted, however, that the load classification of Service vehicles in the main is not the same as for civil vehicles—for example, a Service 3-ton vehicle is the equivalent of a commercial 5-ton vehicle.

128 Signal equipment

This table gives a limited but representative selection of signal equipment. Radar equipment is excluded.

129 Engineer stores

Production of engineer stores covered a wide range of field, bridging and civil engineering equipment and amenity items, for example, refrigeration and airconditioning equipment.

The items included in this table are confined mainly to bridging equipment and are not a representative

selection of engineer stores.

### AIRCRAFT

131 Production of aircraft by structure weight

The structure weight of an aircraft is the empty weight of the fuselage, wings, undercarriage, engine nacelles and flying controls. Engines, propellers, turrets, guns, electrical equipment and radio sets are excluded.

132 Index of aircraft production

Neither structure weight nor unadjusted manhours taken separately were found to be a satisfactory basis for an index of aircraft production. Accordingly, this index is based on manhours standardised by reference to structure weight for the three main groups of aircraft produced, namely, heavy, medium and fighter bombers; other operational aircraft; and trainers.

133 Aircraft awaiting repair and repaired

The aircraft repair figures relate to repairs carried out by the Civilian Repair Organisation only and exclude repairs by squadrons.

134 Engines: Production, imports and repairs

The figures for imports relate to engines imported for the Royal Air Force and Royal Navy. They exclude engines returned to the United Kingdom for repair and re-export.

Repairs are those carried out by the Civilian Repair Organisation and exclude repairs by squadrons.

135 Arrivals of aircraft from North America

and The term "arrivals" covers aircraft despatched both by air and by sea and imported for the Royal Air Force and Royal Navy.

### MANUFACTURED GOODS

137 Deliveries of machine tools, small tools, welding sets and electric motors

### Machine tools

For definition see the Control of Machine Tools (No. 12) Order 1942. The table excludes, except from the 1935 figures, metal-working and wood-working tools of value less than £50. The value figures exclude replacement parts.

### EXTERNAL TRADE

Table

Metal-working machine tools

The following types are included: automatics, borers, broaches, drills, gear-cutters, grinders, lappers and honers, capstans and turrets, lathes, millers, planers, presses, saws, shapers, shears, sheet metal working, slotters, screw, thread and miscellaneous metal-working machine tools.

Wood-working machine tools

The following types are included: saws of all types (except hand saws), drills, grinders and sharpeners, gluers, lathes, morticing and tenoning machines, dovetailing machines, planers and moulders, routers, sanders, veneering machines and miscellaneous woodworking machine tools.

Engineers' small tools

These include cutting tools, chucks, jigs and fixtures, press tools and gauges.

Welding sets

The value figures exclude replacement parts.

### 139 Locomotives and motor vehicles

Locomotives

The figures show the number of steam locomotives produced by railway workshops and by private makers and include production for the Services.

Main line types comprise passenger tender, passenger tank, freight tender (including mixed traffic), freight tank, Garratts and other steam types.

Industrial locomotives include shunters for docks.

140 Woven cloth, household textiles, hosiery and footwear

Supplies for home civilian use include retained imports where these are distinguished in the Trade and Navigation Accounts, supplies for N.A.A.F.I. and for local authorities, hospitals, etc., but exclude supplies for Government orders and for export. For 1935 the figures are based on the Census of Production, adjusted for retained imports and exports.

Woven wool cloth

Supplies are the deliveries by manufacturers of tissues containing 15 per cent, and over of wool fibre, excluding hair fabric used for interlining and similar purposes. Cloth for uniforms for Civil Defence, transport purposes or hospitals, etc. is not included if specially issued by the Wool Control.

Woven non-wool cloth

Supplies are the deliveries by manufacturers and merchant converters registered under the Apparel Table

and Textiles Order. Cloth for handkerchiefs and babies' napkins is included.

Wool hand-knitting yarn

All hand-knitting yarn, including yarn of Service shades and mending yarn, produced on wool machinery.

### Blankets

The figures relate to supplies of full-size and cot blankets, and are based on manufacturers' deliveries.

#### Towels

"Other" towels include roller towels, tea towels, glass cloths, etc.

#### Hosiery

Garments made up from warp knitted fabric are excluded. The figures for children's garments cover all children under fourteen and thus include infants' wear. The pre-war figures quoted are estimates for 1937.

#### Footwear

Total production for all uses is the output by manufacturers during the period. Production for home civilian use is the quantity of footwear transferred to warehouse stock by all manufacturers of leather footwear, excluding production for export or for which leather is procured under permit from the Director of Service Footwear; thus footwear for the Home Guard, Civil Defence and Women's Land Army is excluded. All rubber boots and shoes and canvas shoes with rubber soles are excluded, but other rubber-soled footwear is included under the appropriate heading. Children's footwear includes that for infants.

### 141 Pottery, hollow-ware and brushes

Production figures relate to manufacturers' sales. Supplies for home civilian use include retained imports where these are distinguished in the Trade and Navigation Accounts, supplies for N.A.A.F.I. and for local authorities, hospitals, etc., but exclude supplies for Government orders and for export.

Pottery

Small plates are those of 8-inch diameter or less, large plates are over 8-inch diameter.

Coffee-pots are included from March 1943 only.
Until February 1943 the figures for cooking-ware relate to pie and baking dishes only.

### VIII. EXTERNAL TRADE

The tables covering external trade have been compiled from information published in the Annual Statements of Trade of the United Kingdom and from the monthly Accounts relating to the Trade and Navigation of the United Kingdom.

### Quantities and values

Both quantities and values are based on the declarations of importers and exporters, or their agents, which may be verified by Customs officials. The value of the imports represents the open market value as defined by Section 10 of the Finance Act, 1935. Briefly stated, this value is the price which the goods would fetch on sale in the open market at the time of import if the goods were delivered to the buyers at the port or place of importation, freight, insurance, commission and all other costs, charges and expenses incidental to the making of the contract of sale and

the delivery of the goods at that port or place (except any duties of Customs and purchase tax) having been paid by the seller. The value of the exports represents the cost of the goods to the purchaser abroad, including packing, inland and coastal transport in the United Kingdom, dock dues, loading charges and all other costs, profits, charges and expenses (for example, insurance and commission) accruing up to the point where the goods are deposited on board the exporting vessel or aircraft or at the land boundary of Northern Ireland, and is known as the "free on board" value.

### Imports and exports

Military stores

Stores owned by the Government of this country shipped for the use of United Kingdom forces abroad are excluded from the export figures. Similarly, military stores carried in Government vessels and captured enemy equipment imported by Government departments are excluded.

Stores and equipment imported direct by Commonwealth and allied forces and auxiliary bodies based in the United Kingdom are excluded. Imports by a United Kingdom Government department (unless carried in Government vessels) even though transferred subsequently to such forces within the United Kingdom are however included in the figures.

Stores for N.A.A.F.I., the Y.M.C.A. and other similar organisations are included.

### Munitions

The figures for 1942 to 1945 exclude imports, exports and re-exports of "munitions", that is, aircraft and other vehicles and parts (except rubber tyres and tubes), arms, ammunition and military and naval stores. From 1938 to 1941 such goods are included under the appropriate headings of the Trade Accounts except that certain warlike stores imported for Government

Table

use are included under a comprehensive heading for Government stores (Class III, Group U (Miscellaneous articles wholly or mainly manufactured)).

Relief and rehabilitation, lend-lease and mutual aid

Exports of goods for relief and rehabilitation of liberated countries in Europe are included in the figures whether exported by U.N.R.R.A., by a United Kingdom Government department or on behalf of the country concerned.

Goods imported under lend-lease and mutual aid arrangements are included throughout under the appropriate headings; those imported by U.N.R.R.A. for its official use are excluded.

Parcels for prisoners of war and the armed forces

Parcels despatched to prisoners of war are excluded from the export figures.

Parcels despatched to United Kingdom or allied forces abroad are included as exports under the heading of "parcel post" except where they contain tobacco or other goods exported on drawback when they are included under the appropriate export heading.

Parcels from North America to United States and Canadian forces in this country are excluded. All other parcels are included as imports, those containing goods liable to import duty being recorded under the appropriate headings and not under parcel post.

### Miscellaneous exclusions

Bullion and specie, ships stores and bunkers and ballast of no commercial value are excluded from both exports and imports. In addition, exports exclude personal and household effects taken by passengers for private use and articles exported solely for temporary exhibition in galleries and museums abroad. Imports exclude fresh fish and shell fish of British taking landed from British ships, gifts for members of the forces and for approved war charities, etc.

### IX. TRANSPORT

### MERCHANT SHIPPING

Gross tonnage

The total volume of all the enclosed spaces of a vessel above the inner bottom. The unit of measurement is a ton of 100 cubic feet.

Deadweight tonnage

The number of tons (2,240lb.) of cargo, stores, bunkers, equipment, etc., that a vessel carries when floating at her summerload draught.

Net tonnage

Net tonnage is the gross tonnage less certain deductions on account of crew space, engine room, water ballast and other spaces not used for passengers or cargo.

151 Merchant shipping under British control

to Foreign vessels
153 Rarehoat char

Bareboat charter transfers to the charterer the responsibility for manning, upkeep and other functions normally assumed by the owner.

159 Shipping movement at United Kingdom ports: Entrances and clearances in the foreign trade

Foreign trade

Trading vessels engaged in voyages direct from any port abroad (including the Channel Islands and Eire) to a port in the United Kingdom (including the Isle of Man) or vice versa. Vessels calling at more than one United Kingdom port in the course of a single voyage are recorded as entered or cleared at one port only.

The figures exclude naval vessels or vessels with naval crews requisitioned or chartered for naval or military transport services, but vessels on Government service with mercantile crews are included. Other exclusions are pleasure yachts sailed privately, tugs engaged on the coasts of the United Kingdom, vessels entering ports for shelter through stress of weather and British fishing vessels.

### Vessels with cargo

Vessels loading or unloading cargo, even though principally engaged in carrying passengers. Cargo consists of merchandise (other than Government stores, ships stores or bunkers), bullion, specie or mail.

### Vessels in ballast

Vessels other than those defined above under vessels "with cargo". The figures include vessels unloading or loading only Government stores, that is, goods consigned direct to Allied or Commonwealth forces in this country or reshipment of such goods; goods shipped by a United Kingdom Government department for the use of United Kingdom forces abroad or re-imports of such goods and imports of captured enemy military equipment.

### 160 Arrivals of shipping at United Kingdom ports

Vessels calling during the course of a single voyage at more than one port are recorded as arrived and departed at each port. The extent of the duplication, so far as inward movement is affected, can be seen by comparing the figures for foreign trade arrivals in this table with those for entrances in Table 159.

The terms "cargo" and "ballast" are defined as for Table 159.

### RAIL TRANSPORT

### 164 Repair and availability of rolling stock

### Locomotives

Steam, electric, petrol, oil and oil electric locomotives but excluding rail-motors. Figures do not necessarily show the number owned by the railway companies as account has been taken of loans made to and by the railway companies, the Service departments, the Ministry of Supply, etc.

### Passenger-carrying vehicles

Rail motor vehicles and steam and electric coaches. Account has been taken of loans made to and by the railway companies, the Service departments, the Ministry of Supply, etc.

### Trucks and wagons

Most of the privately owned wagons in Great Britain were requisitioned in September 1939, with the exception of tank wagons, certain specially constructed wagons and wagons set aside for special traffic such as tarred road materials, cement, salt, etc.

### 165 Passenger and goods traffic

### Passenger journeys

The figures of passenger journeys show the number of journeys originating on the railway system of Great

Table

Britain, including through booked passenger journeys commenced by road and completed by rail.

Children for whom tickets are issued are treated as adults, but infants in arms are excluded. Return tickets are counted as two journeys and the number of journeys by season ticket holders are on the basis of 600 journeys per annum. Government department traffic (for example, naval, military, etc.), tickets under bulk travel arrangements and other reduced fare traffic are included.

### Estimated passenger miles

Figures relate to main line companies only and are estimated.

### Goods, mineral and livestock traffic

The figures show the tonnage of revenue-earning traffic conveyed by trains on the railway system. Cross-channel traffic invoiced to interior stations is treated as originating at the port of entry.

Free-hauled traffic, which includes servicing materials for the railways conveyed without charge on revenue-earning trains, and traffic conveyed on ballast trains or departmental trains is excluded.

### Estimated net ton-miles

The product of the load conveyed and the miles travelled including free-hauled traffic.

### 166 Operating statistics

### Loaded train-miles

The distance run by all types of revenue-earning trains calculated on the actual distance worked to the nearest mile. Coaching trains are trains made up entirely of coaching vehicles for the conveyance of passengers and other traffic scheduled as passenger train traffic, such as parcels, mails, etc. Freight trains are those composed of wagons, trucks, etc., used for the conveyance of goods traffic at freight train charges. The mileage of trains consisting of both coaching and freight vehicles and scheduled as "mixed" have been divided equally between coaching and freight.

### Loaded wagon-miles

The mileage of loaded wagons including those loaded with free-hauled traffic worked on revenue-earning trains. Each vehicle is counted irrespective of its capacity or its load. The distances correspond to those for train miles but no mileage is included for the distances covered by wagons when being shunted.

### 167 Traffic receipts

From 1st September 1939, under the Railway Control Agreement, the receipts of the controlled undertakings (the four main line railway companies, London Passenger Transport Board, their joint lines and certain minor railways) were pooled and clearances between undertakings were not made. These figures represent, therefore, the originating receipts of the major portion of the Pool.

On 11th June 1939 railway passenger fares in the London area, including those on the London Passenger

Transport Board, were increased by 5 per cent. to the level of fares outside London; on 1st May 1940 railway passenger fares (except season tickets and workmen's fares) and freight rates were increased by 10 per cent.; on 1st December 1940 this percentage was raised to 16½. On the London Passenger Transport Board increases in railway passenger fares above 5d. became effective from 1st May 1940 and increases in certain other railway and road transport fares became effective from 3rd July 1940 and 1st December 1940.

Passenger receipts

Passenger receipts are the receipts from passenger fares of all kinds. Charges for platform tickets, seat reservations, left luggage, etc., which are classed as miscellaneous receipts are excluded.

Parcels, mails, etc.

Include receipts from the conveyance of small parcels and other merchandise by passenger train as well as mail and parcel post.

Merchandise

This class includes all freight train traffic except coal and coke and minerals and other commodities carried in bulk.

Minerals

This class covers traffic in Classes 1 to 6 of the general railway classification, that is, minerals and other heavy freight carried in bulk, for example, bricks, iron ore, lime, limestone, pig-iron, road stone and stone in the rough.

Coal and coke

Includes coal, coke, patent fuels, slack, smudge, cannel and coal cinders for fuel.

### ROAD TRANSPORT

168 and 169 Vehicles with licences current and new registrations
These figures are compiled from information received
by the Ministry of Transport from all licensing
authorities in Great Britain which administer the
relevant sections of the Roads Act, 1920. The statistics
are thus a by-product of administration and the
classes shown correspond in the main to taxation
classes. The figures include all vehicles which pay
tax and certain vehicles which are exempt from the
payment of tax. Most of the latter carry a form of
licence known as a "nil" licence.

Exempt vehicles are of three kinds: (a) vehicles which are designed and used for certain particular purposes; (b) those which make little or no use of

Table

public roads; and (c) vehicles owned by Government authorities.

Vehicles in the first class (such as ambulances, invalid vehicles, road construction vehicles and fire service vehicles) are registered when they are first brought into use and pay no tax but they do carry a "nil" licence. They therefore appear in the statistics of licences current. During the war, fire service vehicles were temporarily transferred to the National Fire Service and operated under O.H.M.S. certificates instead of "nil" licences, and during this period they disappeared from the statistics.

Of vehicles in the second class, those which are never used on the public roads (for example farm or works tractors used solely on the farm or site) are not required to bear a licence or to be registered, and are therefore outside the statistics altogether. Vehicles which make no use of roads repairable at the public expense, or make little use, that is, they travel not more than six miles per week while passing between different parts of the owners' lands, are registered but carry no licence. Therefore, they are not included in the statistics of licences current.

Vehicles belonging to the armed forces are not registered and carry O.H.M.S. certificates. Hence they are not included in either table.

Agricultural tractors may fall into the 5s. or £12 class according to the uses to which they are put by the owner. The 5s. agricultural tractor class includes locomotive ploughing engines and other agricultural engines and covers those which are used on roads only for hauling their own equipment, farming implements and the like, or for hauling agricultural produce or requisites provided that the owner is engaged in agriculture and the vehicle is used primarily for work on the land. It also includes some trench diggers, excavators and mobile cranes which are used on roads only for proceeding to and from working sites. Mowing machines are also included. The £12 and over class includes tractors, agricultural tractors and engines (other than vehicles subject to a duty of 5s.) which are registered in the name of a person engaged in agriculture and which are used on the roads solely for the haulage of the produce of and requisites for his own agricultural land.

Agricultural vans and lorries are goods vehicles registered in the name of a person engaged in agriculture and used on roads solely for the conveyance of the produce of and requisites for his agricultural land.

### X. PUBLIC FINANCE

174 Floating debt

Advances from the Bank of England Ways and Means advances.

Advances from Government departments Certain loans made to the Treasury by Public Departments, principally by the Paymaster-General and the National Debt Commissioners, out of accruing receipts.

Treasury bills

The total value of bills held by the market, by Public

### PUBLIC FINANCE

Table

Departments and the Issue Department of the Bank of England.

Treasury deposits by banks

Loans to the Treasury by the banks for periods of six months.

### 175 Currency circulation and bank clearings

Currency circulation

The series showing the estimated circulation of notes and coin with the public relates to the total note issues of the Bank of England, the Scottish banks and the Northern Irish Banks, plus the estimated total of imperial silver, cupro-nickel, bronze and nickelbrass coin in circulation, less notes and coin held by the Bank of England (Banking Department), by the Scottish and Northern Irish Banks (as published in the London and Belfast Gazettes) and by the London Clearing Banks.

Bank clearings

The clearings reported by the London Bankers' Clearing House represent the total of bankers' effects (cheques, drafts, bills, interest warrants, etc.) passed through the clearing houses for collection from the banks.

Before the war the clearing house in London published its figures under three regions—Town, Metropolitan and Country—which covered broadly the City of London, the London suburbs and the rest of England and Wales (apart from the purely local provincial clearings) respectively. This classification ceased when the clearing banks' emergency operations came into force in September 1939.

During the war years the figures include the large volume of transactions settled between the head offices, and branches of the same banks but not cheques cashed over the counter. A partial return to pre-war methods, which excluded these transactions, began in October 1945.

Provincial clearings represent similar collections at the twelve clearing houses operating in the provinces.

### 177 External disinvestment

This summary table estimates, over the period from the outbreak of war in Europe to 30th June 1945, the effect of the war upon the United Kingdom in terms of capital loss in the overseas financial position. This loss took the form of the realisation of investments, the incurring of debts in the form of sterling liabilities, etc., and the running down of gold and dollar reserves. The sum of these represents the loss of overseas wealth which the United Kingdom suffered in order to meet overseas military expenditure and the cost of essential services and supplies from abroad.

Lend-lease and reciprocal aid

178

and

179

The material contained in the two tables dealing with lend-lease and reciprocal aid has been extracted from a paper "Mutual Aid between the U.S. and the British Empire, 1941-45" read before the Royal Statistical Society by Professor R. G. D. Allen on 29th May 1946. A brief description of the nature of the material

Table

used and of its source is given below. Fuller information can, however, be obtained from Professor Allen's paper (Journal of the Royal Statistical Society, Vol. CIX, Part III, 1946, pp. 243-277).

### United States lend-lease aid to the British Empire

The figures relate to goods transferred and services rendered under lend-lease as recorded by the Foreign Economic Administration (F.E.A.) and published in the Reports to Congress on lend-lease operations made quarterly by the President. Certain major revisions were made on the cumulative returns after June 1945. Aid to the British Empire shown in this table agrees with the revised F.E.A. figures cumulatively to 30th June 1945 and to 31st August 1945. The analysis by periods to mid-1945 is obtained from differences in F.E.A. cumulative figures on the unrevised basis, except for adjustments in services and in industrial products (metals and machinery) arising from the revision. The analysis by periods must therefore be accepted with caution.

The classification adopted is as follows:

- (a) Munitions: aircraft, ordnance, combat and motor vehicles and related equipment; small water-craft and naval equipment; signal engineer, quartermaster, medical, chemical warfare and other military stores.
- (b) Ships (sail-away): naval and merchant vessels delivered under their own power.
- (c) Other goods: agricultural products, raw materials, petroleum and manufactures.
- (d) Services: ship repair, freights, ships' stores and other shipping services; ferrying of aircraft; training of personnel; storage and transportation; materials and charges for construction of bases; miscellaneous expenses.

Since Canada did not receive lend-lease aid, goods exported by the United States to Canada for the eventual use of the United Kingdom are included in the United Kingdom figures. Lend-lease aid has been shown as valued by the United States in dollars and reciprocal aid (in Table 179) as valued by the United Kingdom in £ sterling. Any direct comparison raises the difficult problem of the appropriate relation between the dollar and the £ sterling. The official rate of exchange has no relevance to the problem. What is required is either an evaluation of what lendlease aid to the British Empire would have cost if the goods had been produced and the services rendered in British countries, or an evaluation of what reciprocal aid to the United States would have cost at the United States prices used in the accounting of United States lend-lease aid. For munitions and military stores (excluding food) an item by item comparison of unit costs in the United States and United Kingdom indicates that an appropriate average of conversion is around \$7 to £1. For other goods and for services only a fragmentary comparison of the United States and United Kingdom prices used in mutual aid valuations is possible. The appropriate

conversion rate, however, would seem to be not far from the official rate of exchange, that is about \$4.03 to £1.

### United Kingdom reciprocal aid

The figures have been derived from the White Papers on Mutual Aid (Cmd. 6483, 1943 and Cmd. 6570, 1944) and cumulative data subsequently compiled by the Treasury. Figures of petroleum provided in India are from United States Army records supplied to the F.E.A.

The classification follows closely that for United States lend-lease in the previous table. Military stores include all munitions and other stores for direct use by foreign forces with the exception of petroleum and Table

food. Services are mainly transportation but also include building maintenance. The construction figure represents the cost to the Service departments of the construction of military installations and includes the whole cost of the Mulberry Harbour.

Aid to the United States in the United Kingdom comprises all transfers of goods and services to United States forces in the United Kingdom, but shipping services and petroleum tankers are on a world-wide basis. Aid in the United States includes both goods transferred in the United States as food and materials exported from the United Kingdom and the colonies to United States. Aid in overseas theatres includes transfers and construction in the colonies as well as in various theatres of war.

### XI. NATIONAL INCOME

180 to 186 Tables 180-186 have been prepared as far as possible on the same basis as those contained in "National Income and Expenditure of the United Kingdom 1946 to 1949" (Cmd. 7933, 1950). The correspondence, nevertheless, is not exact. While continuity has been preserved for the war years 1939-1945 there remains in certain points of detail an unavoidable break between the figures for this period and the figures for 1938 and for the post-war period. This applies chiefly to the accounts of public authorities.

It must be strongly emphasised, moreover, that the estimates given here are not based on exact knowledge, but are derived from information collected by government departments and private organisations for needs other than the estimation of national income. In some cases the information is very incomplete. No direct estimates of personal saving or of capital formation have been possible. Personal saving has been obtained by subtracting personal expenditure from personal income, and gross capital formation by subtracting all other components of national expenditure from the total of national income and depreciation.

For detailed definitions of terms reference should be made to Cmd. 7933. For items where the title is not self-explanatory, or to which special qualifications apply, brief notes are added below.

180 National income, depreciation and expenditure

The first part of this table presents estimates of the incomes received, in cash and in kind, by factors of production in producing the current output of goods and services of all kinds. The incomes are reckoned before tax, but after the amounts allowed for maintenance and depreciation in the calculation, for tax purposes, of net rent and profit. The total of these amounts together with the provision for maintenance by public authorities is given separately in this table.

Wages cover only the earnings of manual workers while salaries cover the earnings of administrative, professional, technical, clerical and office staff, including the earnings of shop assistants, commercial

travellers, nurses and members of the police force and National Fire Service. In principle untaxed allowances of salary-earners and company directors' fees are also included in *salaries*.

Income from farming

This item represents the reward of the manual and managerial labour of farmers and their wives and the return on their capital. The estimates, still subject to revision, were originally calculated for crop years June to May. The figure given in the table for the calendar year 1938 includes five-twelfths of the income gained in the crop year 1937-38 and seven-twelfths of that for 1938-39; and similarly for other years. For example, the increase shown between 1938 and 1939 reflects in fact the higher profits reaped in the beginning of 1940.

Professional earnings

This item includes the earnings of doctors, dentists, lawyers, artists, journalists and other professional persons. It excludes the profits of brokers, auctioneers, estate agents and of other businesses where the profits made depend on the making of contracts on behalf of others or in the giving of commercial advice relating to contracts.

Profits of other sole traders and partnerships

This item includes the profits of all unincorporated enterprises other than those shown separately in income from farming and professional earnings.

Trading profits of companies

This item covers the trading profits of companies and mutual societies other than the profits included in "net income from abroad", together with the surpluses, before deduction of interest or dividends on sales, of co-operative societies and public boards.

Operating profits of public enterprises

The trading profits of local authorities before charging interest on, or amortisation of, debt *plus* the profit under the Railway Agreement *less* the loss incurred by the Exchequer in 1945 as a result of illicit trading operations abroad by members of the armed forces

and other government employees. The definition of this item differs from that in Cmd. 7933 by the exclusion of the trading profits of the Board of Trade and Ministry of Supply and of the interest carried as a national charge in the commercial accounts of government trading branches.

### Rent of land and buildings

This item represents the net rental value on a Schedule A basis of lands and personal and business property, together with excess rents assessed under Schedule D.

#### Net income from abroad

This item is made up of the profits remitted home by British companies operating abroad (other than oil, shipping and insurance companies, all of whose profits are included above) plus interest and dividends received from abroad less profits remitted abroad and interest and dividends paid (after deduction of tax) to non-residents.

### National expenditure

The second part of Table 180 presents estimates of expenditure by residents of the United Kingdom on goods and services. The expenditure is recorded at market prices. From this expenditure is derived not only the incomes of the factors of production that produced the current output of goods and services, but also (i) the amounts to be provided for the maintenance, repair and replacement of the capital equipment used by the factors of production as part of the process of current output and (ii) the indirect taxes on outlay collected from producers by public authorities *less* subsidies paid to producers.

Gross national expenditure at market prices includes the amounts in both (i) and (ii). Gross national expenditure at factor cost excludes the amount in (ii) and is equal to national income plus depreciation.

Personal expenditure on consumers' goods and services This item is described in the notes to Table 186.

# Public authorities' current expenditure on goods and

The term "public authorities" covers the central government, together with all extra-budgetary funds (in particular the Unemployment Fund and various national health insurance and pensions funds), and local authorities.

Only direct expenditure on goods and services is included, except that the provision made for maintenance is treated as a current cost and therefore as part of gross national expenditure. This provision is measured, in the case of the central government, by the amount actually spent on the maintenance of roads and buildings and, in the case of local authorities, by the amounts spent on maintenance of highways and bridges plus loan repayments and payments to sinking funds on rate-fund account, these being treated as the equivalent of depreciation allowances. Loan repayments or payments to sinking funds by the central government are excluded. Transfer payments (e.g., social security payments or subsidies) are also excluded, together with any transfers between one

Table

public authority and another. Expenditure refunded to the government or recovered by direct sales has also been excluded.

Capital expenditure by public authorities is included in the total of gross capital formation given separately below when it has been possible to distinguish it. But the separation is by no means complete. For example, it has not been possible to take full account of changes in government-owned stocks. All defence expenditure has been treated as current.

This item thus attempts to measure the value of the work currently performed on government account and the Exchequer's cash issues have been adjusted as far as possible for changes in department's cash balances and in the Government's liabilities to industry.

It is not, however, a consistent measure of the value of resources at the disposal of public authorities since lend-lease assistance has been excluded throughout with the one exception that the 1945 figure includes an amount of £161 million (\$650 million) to cover the final settlement with the Government of the United States.

### Gross domestic capital formation

This item is composed of gross expenditure, both public and private, on fixed capital and its upkeep (i.e., new additions, replacements and repairs) plus the increase in value of stocks and work in progress. It has been impossible to estimate this item directly for the war years and the figures given here have been obtained as a residual. They are therefore dependent on the accuracy of the estimates of each of the other items of national income and expenditure. Moreover, as explained above, part of capital formation may be included in public authorities' expenditure. The figures given here should therefore be treated with great reserve.

# Net lending abroad and purchase of assets and financial claims from overseas

This item is an estimate of the net change in the external assets of the United Kingdom. It is equal to the surplus (or deficit) of the balance of payments on current account, i.e., to the difference between the country's current receipts from abroad and its current payments to foreigners. Lend-lease has entered into this item in only one year: the 1945 figure includes the liability of £161 million to the Government of the United States mentioned above.

### 181 Revenue account of persons

Personal income is made up of (i) incomes from employment for pay or gain (i.e., the first six items of Table 180); (ii) receipts by persons (treating charities, life insurance funds and other non-profit-making bodies, as persons) of net rent, dividends and interest paid by companies and public enterprises, debt interest paid by public authorities and income from abroad; and (iii) transfer incomes—social security benefits, war gratuities, etc. In all cases the income is reckoned before deduction of tax or insurance contributions.

Net saving is the amount left out of personal income after deducting current expenditure on consumers' goods and services, the tax liable on current income (whether paid currently or in the future) and taxes paid on capital (e.g., death duties).

182 Revenue account of public authorities

This table summarises the income and expenditure of public authorities after eliminating transfers between one public authority and another, such as Exchequer grants to local authorities and Exchequer contributions to insurance funds.

Miscellaneous income from property

This is made up of the profits of public enterprises and receipts of dividends, interest and rent (including national debt interest paid to the Unemployment Fund and national health insurance funds and debt interest paid by local authorities to the central government). Total national debt interest plus the total interest on local authorities' debt is treated as negative income from property.

183 Combined capital account

This table shows the sources from which gross capital formation was financed. Transfers from public authorities (the same as transfers to capital accounts shown in Table 182) consist of payments in respect of war damage claims and capital grants to local authorities.

184 Central government revenue

Tax revenue represents the net receipts by the Board of Inland Revenue and H.M. Customs and Excise as distinct from payments into the Exchequer.

185 The finance of the central government deficit on current account

Small savings

The increase in investments from the net deposits in the Post Office and Trustee Savings Banks together with receipts *less* repayments of National Saving Certificates and Defence Bonds.

Other public issues (net)

Receipts *less* redemptions, but excluding purchase of government securities by public departments.

Floating debt

Treasury bills, treasury deposit receipts and Ways and Means advances.

Lending and net capital formation

Includes loans to local authorities, Post Office loan expenditure, and Road Fund expenditure on improvement and new construction of roads.

186 Personal expenditure on consumers' goods and services

The totals shown in the table relate to expenditure out of personal income, i.e., the income of individuals and of charities and other non-profit-making bodies. The estimates for the different groups of expenditure Table

include purchases by visitors to the United Kingdom and exclude purchases abroad by British troops and tourists. Rough adjustments for these factors are made at the end of the table.

Expenditure on consumers' goods and services by business firms and public authorities is as far as possible excluded except in certain cases where the object purchased is resold to persons as part of a composite product or service. Thus personal expenditure on meals in restaurants and hotels is spread over several categories. The cost to the establishment of the food used appears in the item "Food"; the rent of the building in the item "Rent, rates and water charges"; the chinaware and cooking utensils in the item "Durable household goods", and the allowance for the purely service and managerial element of expenditure in the item "Other services".

The figures represent the expenditure of consumers in the above sense on goods and services of all kinds whether these are provided out of new production or from stock. Secondhand goods are not included but an allowance is made for the costs, including profit, of handling and reconditioning them. For private motor vehicles this allowance is made in the item "Private motoring": for other goods it is included in "Other services".

The figures in the second part of the table have been obtained by re-valuing at the appropriate 1938 prices the quantities bought in any year of as many individual items as possible within each group of goods and services. The resulting products have then been added to arrive at a total for each group.

As it has been impossible either to allow for restrictions on consumers' choice due to rationing or to take full account of changes in quality, the resulting series must not be regarded as giving a reliable measure of changes in the standard of living.

Definitions of the miscellaneous categories of expenditure are given below.

Durable household goods

Furniture, soft furnishings, floor coverings, musical instruments, radio sets, pottery, glassware, electrical goods and all hardware.

Other household goods

Matches, soap, candles and miscellaneous cleaning materials.

Other services

Medical services not provided under national health insurance, domestic service, undertaking, laundry, hairdressing, hotel and restaurant services, repairs and other miscellaneous services not included elsewhere.

Other goods

Stationery, fancy goods, bicycles, sports and travel goods, chemists' wares and other miscellaneous goods not included elsewhere.

Table

187 to 189 Average weekly earnings and hours worked in manufacturing and certain other industries

The figures relate to all wage earners other than office staffs, shop assistants and outworkers; managers, commercial travellers, clerks, typists and salaried persons generally are excluded.

The industries covered are those for which separate figures are given together with mining and quarrying (excluding coal mining), treatment of non-metalliferous mine and quarry products, leather, fur, etc., woodworking, paper, printing, stationery, etc., miscellaneous manufacturing industries, Government industrial establishments, local authorities' non-trading services, gas, electricity and water supply services. The figures are based on returns from employers showing for a particular week in the month indicated, the number of wage earners actually at work, their aggregate earnings and the total number of manhours worked. The returns received at each enquiry covered five to six million workers, but in calculating the general averages and those for each of the groups of industries shown separately the averages for the individual industries have been "weighted" on the basis of the total number of wage-earners employed in each industry. In the case of women two part-time workers were, from July 1942 counted as one full-time

The percentage increases in average earnings since October 1938 represent the combined effect of a number of factors, including (a) increases in rates of wages; (b) increases or decreases in the number of hours worked and in the proportion of hours paid for at overtime, week-end and night shift, etc., rates; (c) extensions of systems of payment by results in some industries, and increased output by the workers affected; (d) changes in the proportions of men, boys, women and girls employed in different occupations and (e) changes in the proportions of workers employed in different industries.

#### 190 Wage rates and cost of living

Weekly wage rates

The figures are based on wage records in 69 industries, which include most of the principal industries and a proportion of the smaller industries. The principal industries or services which are not covered are the distributive trades, domestic service, the catering trades, National Government service and entertainment, sports, etc.

The series shows the estimated percentage increase in all industries since the beginning of September 1939. Estimates are made monthly by the Ministry of Labour and National Service of the average percentage increase in rates of wages, for a full week's work, in industries, occupations and localities in which changes in the general levels of wage rates are regulated by collective agreements between organisations of employers and workpeople, arbitration awards or statutory orders. The percentages of increase since September 1939 vary considerably in different

Table

cases and in combining these percentages into a general average the Ministry of Labour has taken account of the approximate total pre-war wages bill in the various industries. The figures do not, however, take account of the effects on the general level of wages of the changes which have occurred since 1939 in the proportions of workpeople employed in different industries, nor of increases in wage rates granted by employers to individual workers. In the absence of comprehensive information as to the rates of wages actually paid by employers generally to their workpeople, the average percentages shown should not be regarded as more than rough approximations.

## Working-class cost-of-living index

The figures are derived from the changes since 1st September 1939 shown by the Ministry of Labour cost-of-living index. This index measured the average percentage increase in the cost of maintaining unchanged the standard of living prevailing in working-class families before August 1914. The percentage changes since July 1914 in the prices of the various commodities and services included in the index were combined by means of weights representing the estimated relative expenditure on these commodities and services by working-class families at that date. The 1914 weights for each of the main expenditure groups were: Food  $7\frac{1}{2}$ , rent (including rates) 2, clothing  $1\frac{1}{2}$ , fuel and light 1, other items included in the index  $\frac{1}{2}$ .

## 191 Agricultural price indices

The prices used were the controlled prices or, where the product was uncontrolled, quotations made weekly by the Ministry's market reporters; Government payments such as acreage payments are taken into account. Thus so far as is possible the prices used are those relating to the point of first sale by the producer. In the case of fruit, vegetables and glasshouse produce, however, the prices are, for the most part, based not on prices realised by growers but on the prices realised by primary and secondary wholesalers at certain representative urban markets. Exceptional prices at the beginning and end of the season are excluded.

The index number for all products is the weighted arithmetic mean of the percentage price changes of 24 main items compared with prices in the base years.

The weight assigned to each commodity is proportional to the average value of the output of the five most recent crop years, re-valued at the prices of the base period 1927–29. Thus for the year 1945 the weights will be derived from the average quantities of output during the crop years 1939/40 to 1943/44 re-valued at the prices for 1927–29. As the system of moving weights involves a change in the weights used from year to year the following table allows a comparison to be made between weights in 1938 and 1945.

Table

Moving weight	s used	in the	index	of agri	cultural	prices
					1938	1945
Total					200	200
Wheat					6	12
Barley					4	7
Oats					2	1
Potatoes					10	14
Hay					4	2
Fat cattle					18	16
Fat cows					7	6
Fat sheep	1				7	6
Fat ewes					3	3
Pork pigs					8	5
Bacon pigs	4.				11	7
Fat sows					3	2
Milk					46	53
Butter					3	1
Cheese					1	-
Poultry (for	wls an	d duc	ks, an	d, in		
annual in					5	4
Eggs					18	12
Sugar					7	8
Hops					2	2 5
Fat lambs		1			6	- 5
Wool					4	4
Fruit					10	12
Vegetables					12	14
Glasshouse	produ				3	4
D at at				2 41	a in also	da

Both the wheat and potato indices include an allowance for acreage payments; for wheat the addition is based on the estimated quantity sold, for potatoes on the estimated total production. The indices for potatoes include only prices for January to June and September to December, and are based on the average of these months in the base years.

Index numbers calculated on the base 1927-29=100 have been multiplied by appropriate factors to convert them to the base 1936-38=100.

#### 192 Stock and fertilizer prices indices

Prices for certain breeds quoted by the Ministry's market reporters are used in calculating the price indices for dairy cows, store cattle, store sheep and store pigs.

The index of fertilizer prices is calculated from quotations for basic slag, sulphate of ammonia, ground rock phosphate, nitrate of soda, nitro chalk and superphosphate.

Weights used in the calculation for this index are as follows:—

Total		100
Ground rock phosphate	 	5
Nitrate of soda	 	6
"Nitro-chalk"	 	8
Sulphate of ammonia	 	33
Superphosphate	 	36
Rasic slag	10/22	12

The method used is similar to that for agricultural prices but the weights applied to the different commodities are fixed and are proportional to the estimated average annual consumption of these materials in the calendar years 1937 and 1938.

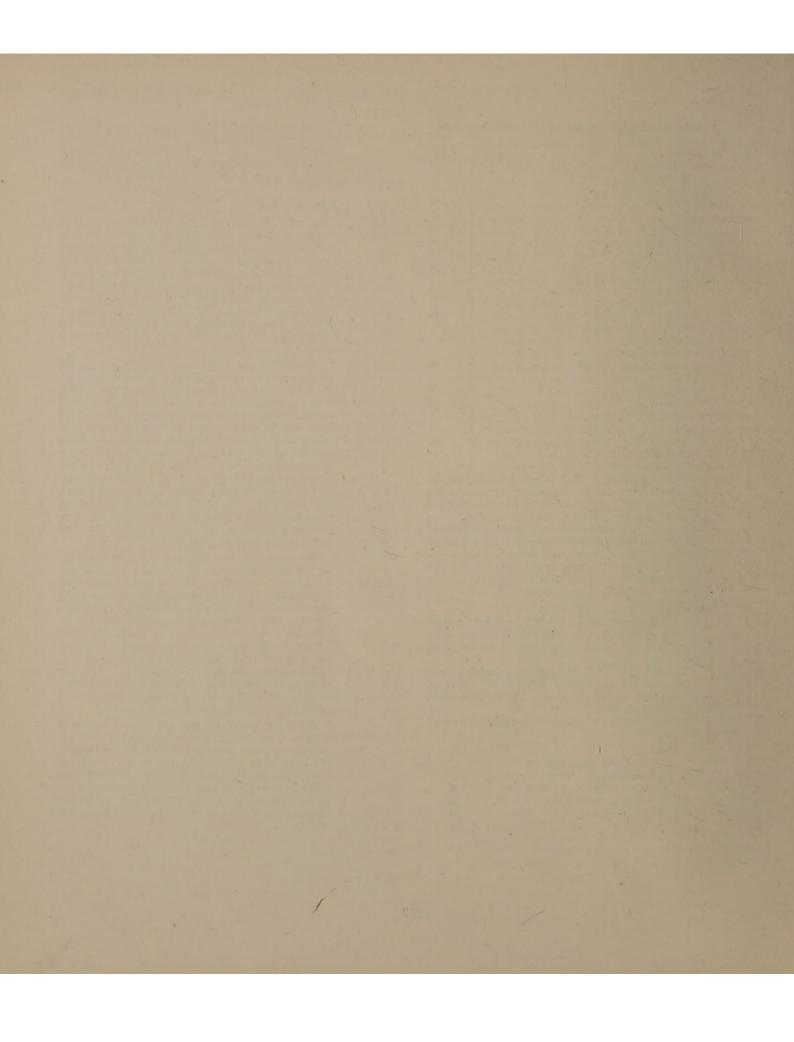

#### 193 Wholesale prices

The index is computed as a geometric average of 200 price changes. The number of varieties of each commodity chosen is as nearly as possible the same proportion of 200 as the value of the imports and production of the commodity (including any further stages of manufacture not separately represented in the index) is of the total for all articles in 1930. In a few cases (for example, other chemicals) in order to improve the representation, prices of several items are averaged to form a single series with a weight of

Thus while the index is computed as a simple average, a system of weighting is in reality achieved. As far as possible, duplication between the various trades comprised within a group has been eliminated as has also the duplication between groups resulting from the inclusion in one group of a commodity which clearly forms a dominant material in another group. In this way the overweighting of certain commodities has been avoided. Thus coal, which is largely used in industry as a fuel or a raw material is to that extent already embodied in industrial output, and accordingly only receives representation in the index number in relation to its importance for other purposes including the production of gas and electricity for non-industrial uses.

The index is divided into two major groups, food and tobacco (68 items) and industrial materials and manufactures including fuel (132 items). Excluding fuel, the items in the latter are regrouped to form index numbers of basic materials (33 items), intermediate products (38 items) and manufactured articles (48 items). The latter relates to goods which are mainly manufactured rather than goods which are complete and ready for consumption for which it is difficult to get satisfactory price quotations. A further index number for building materials is also compiled; in this, the weight assigned to each commodity is based on its importance as a building material.

The price quotations used are for the most part weekly. For dutiable goods they include the appropriate amount of duty and for subsidised goods, the lower price (after deduction of the subsidy) is used. The weekly quotations are combined into monthly averages so that the index numbers relate to the average for the month. Annual indices are obtained by taking the geometric mean of the monthly indices.

# INDEX

## Figures indicate Table numbers

Abrasives: exports, 144 retained imports, 143	America: trade with, 145, 146	Auxiliary Territorial Service : casualties, 14 prisoners of war, 14
Absenteeism: in coal mines, 76	Ammonia: production, consumption and stocks, 102	Aviation spirit :
Acrylic sheet: production, consumption and stocks, 103	Ammonium sulphate : exports, 150 prices, 192	arrivals, 83 deliveries into consumption, 86 production, 84, 85
Ages, of population, 2, 3  Agriculture: employment, 9, 18 crops: acreage, 55, 56 harvested, 57, 58 yield, 59, 60	Ammunition: index of production, 117 production, 123-125  Anhydrite: production, consumption and stocks, 101	Bacon: consumption, 69 lend-lease arrivals, 71 production, 68 supplies per head of population, 70
grassland, acreage, 55, 56 machinery: exports, 150	Animal feeding stuffs: consumption, 69 imports, 147, 162	Bailey bridge panels : production, 129 Bank advances, 174
imports, 149 in use, 64 production, 138	losses at sea, 72 retained imports, 143	Bank clearings, 175 Banking, 175, 176
prices, 191, 192  Aircraft: arrivals overseas, 136 arrivals in United Kingdom, 135 index of production, 132 production, 130, 131 repairs, 133	Anthracene: production, 78  Anthracite: consumption, 74 stocks, 75  Anti-aircraft:	Barley: acreage, 55, 56 consumption, 69 harvested, 57, 58 imports, 147 movement off farms, 65 prices, 191
Aircraft carriers : production, 111	ammunition, 123 guns and equipment, 118, 119, 121	yield per acre, 59, 60  Basic slag:
Aircraft engines: imports, 134 production, 134 repairs, 134	Apparel: exports, 144 imports, 149 retained imports, 143	prices, 192  Basic slag, ground: production, consumption and stocks 102
Aircraft production: employment, 23	Approved societies, 41  Argentine Republic:	Battleships: production, 111
Airfields: construction, 54	Armed forces: age distribution, 11	Bauxite: imports, 148 production, consumption and stocks, 9
Airfield track: production, 120	casualties, 12, 14 ex-members unemployed, 9	Beer: exports, 150
Air raid damage: repairs, 54	intake and outflow, 12 pay and allowances, 180, 181 releases, 12, 13	Belgium: trade with, 145, 146 Betting offences, 45–48, 50
Air Raid Precautions services : numbers employed, 16	strength, 9, 10 Armoured cars:	Beverages: exports, 144
Alcohol, industrial: production, consumption and stocks, 101	production and arrivals, 126 Armoured fighting vehicles:	retained imports, 143 Birth rates, 4
Alcoholic beverages : expenditure on, 186	index of production, 117 production and arrivals, 126	Births: illegitimate, 4 legitimate, 4
Alumina: production, consumption and stocks, 95	Army: casualties, 14 prisoners of war, 14	live, 4 still, 4 Biscuits:
Aluminium: imports, 149 production, consumption and stocks, 96	Artillery and artillery equipment : production, 118, 123	consumption, 69 production, 68 Bitumen:
Ambulances:	Australia: trade with, 145, 146	deliveries into consumption, 86 production, 84, 85

Blankets:	Casualties :	Clearing banks, 175
home supplies, 140  Boats:	civilian, 37, 38 military, 12, 14	Clothing (see also "Apparel"): expenditure on, 186
assault, reconnaissance and storm: production, 129	Cattle: exports, 144 imports, 147, 149	Clothing industry: average weekly earnings, 189 employment, 9, 26
Bomber aircraft :	population, 61, 62	Coal:
arrivals overseas, 136 arrivals in United Kingdom, 135	prices, 191, 192 purchased for slaughter, 66	coasting trade, 171
production, 130, 131	retained imports, 143	consumption, 73, 74
Bombs, aircraft:	Celluloid:	exports, 144, 150 mined production, 73
production, 124	production, consumption and stocks,	opencast production, 73
Bomb throwers:	103	stocks, 73, 75
production, 121	Cellulose acetate :	Coal-mining:
Books:	production, consumption and stocks,	absenteeism, 76
expenditure on, 186	Cement:	employment, 9, 76 productivity, 76
imports, 149	exports, 150	shifts worked, 76
Borstal institutions, 51	Central government:	wage earners, 76
Brazil:	deficit, 185	Coal tar products:
trade with, 145, 146	revenue, 184	production, 78
Bridging equipment, military:	Cereals: acreage, 55, 56	Coasting trade:
production, 129	consumption, 69	shipping movement, 160, 171 vessels employed, 154
Bronchitis:	exports, 144, 150	
deaths from, 37, 38	harvested, 57, 58 imports, 147	Cocoa : consumption, 69
Brushes:	lend-lease arrivals, 71	exports, 144
production and home supplies, 141	losses at sea, 72	imports, 147
Building industry:	movement off farms, 65 prices, 191	production, 68 retained imports, 143
average weekly earnings, 189 construction activity, 54	production, 68	supplies per head of population, 70
employment, 9	retained imports, 143	Coke:
houses built, 53	supplies per head of population, 70	exports, 144
Building programme, Government:	yield per acre, 59, 60	production, consumption and stocks, 77
numbers employed, 34	Ceylon: trade with, 145, 146	Coke ovens:
Bullion:	Cheese:	coal consumption, 74 coal stocks, 75
advances, 172, 173	consumption, 69	production and stocks of coke, 77
Burma:	imports, 147	Confectionery:
trade with, 145, 146	lend-lease arrivals, 71 prices, 191	consumption, 69
Butter: consumption, 69	production, 68	production, 68
imports, 147	supplies per head of population, 70	Consolidated Fund Services, 173
prices, 191 production, 68	Chemical industry: average weekly earnings, 189	Consols, price and yield, 176
supplies per head of population, 70	employment, 9, 19, 20	Construction activity, 54
	Chemicals:	Consumers' goods and services:
Calcium carbide:	exports, 144	personal expenditure on, 180, 181, 186
production, consumption and stocks,	production, consumption and stocks, 101	Contributory pensions, 43
101 Calcium silicide :	retained imports, 143	Convictions, criminal, 45-51
consumption and stocks, 94	Chocolate and sugar confectionery:	Copper:
Camps, military:	consumption, 69 production, 68	exports, 150
construction, 54	Chrome ore :	imports, 149 production, consumption and stocks, 95
Canada:	consumption and stocks, 94	Corvettes:
